Designer: Yeong Jin Lim

Game Scale

Each hex of a CC:K map represents an area approximately 100 feet across (30 meters or so). Each complete player turn represents an arbitrary segment of game time with each measure of game time abstractly representing several minutes of real time.

Each unit in the game is approximated as a single leader, a team of 3–6 men, or a squad of 8–13 men. Aircraft, radios and individual weapons larger than a grenade, pistol of rifle are represented by their own counters.

IMPORTANT: In CC:K, the motto "a rule means exactly what it says" should be the order of the day. In other words, as quoted from another fine game, Combat Commander Europe: "Do not infer or imagine more to a rule than is stated in it. When in doubt, interpret strictly".

Example A: The KIA event states "Eliminate one broken unit". It doesn't say "...enemy broken unit"; so if you had the only broken unit(s) in play when you revealed this event, you would have to choose one of yours to eliminate.

Example B: Mine rule states that mines will only attack Moving or Advancing units. So a unit entering or leaving a mines hex via the Stealth action would not be attacked.

However, having said that, these rules cannot possibly hope to cover the myriad situations that may arise during game play—so in those instances when an oddball situation surfaces, a healthy dose of common sense coupled with an existing rule or two should suffice to see you through.

Throughout this book you will see numerous shaded boxes such as this one. These boxes are filled with clarifications, play hints, design notes, and other assorted wisdom in order to help ease you along.

To play your first game, you need only read the Components, Core Rules and Order sections that follow, as well as rule concerning Opportunity Fire and Anti-Aircraft Fire. Then set up the Example of Play (in the Playbook) and follow it through to conclusion in order to get a feel for the basic flow of the game. The latter portion of this booklet – entries for Actions, Events, Terrain and Fortifications – can be quickly glossed over and then referred to in more detail as the need arises during game play.

Sentences shaded in yellow are new rules or information appearing in CC:K.
Since this is a CC:K rule "draft", the Introduction, Glossary, and Index are omitted.
CC:K is a combination of CC:E, CC:P, C3i Variant Rules, and some rules I added.

CORE RULES-COMPONENTS

1. FATE CARDS

There are three sets of Fate cards included with this game: one set each for ROK(Republic of Korea Army, sky blue), US(United States, green) and KPA(Korean People's Army, carmine). A player's 72-card Fate Deck is the heart and soul of the game. Once the game begins, no action may be taken on the map by either player – either via Order, Action, or Reflex – without a Fate card in hand allowing it. While a Fate card is in a player's hand, only its Order, Action, or Reflex may be declared: everything else (from the Event down) is ignored.
IMPORTANT: The Initiative card, and the various reference cards included in this game are not Fate cards and thus will never be considered as being part of a player's hand. Further, whenever a rule refers to a "card" without an identifier, it will always be in reference to a Fate card—never the Initiative card, or one of the reference cards(which will always be identified as such).

1.0 Golden Rule

Some card effects or scenario special rules may conflict with one or more general rules in this booklet. When this occurs, the card effect / special rule always takes precedence.

1.1 Hand Size

Each player is allotted a certain hand size depending on his Posture: either Invader (7 cards), Attacker (6 cards), Recon (5 cards), Defender (4 cards), or Straggler (4 cards). This determines both the number of cards that player will begin the game with and how many he will end each of his own turns with. See also rule 17 Posture.

1.2 Card Knowledge

Cards in a player's hand are kept secret from his opponent. Cards in a player's draw pile are kept face-down and secret from both players. Cards in a player's discard pile are public knowledge (face-up) and may be examined by either player at any time.

1.3 Revealing Cards

Whenever a player is instructed to "reveal" a card – during an Event trigger, for example – the top card of that player's Fate deck is turned face up then placed on top of his discard pile for both players to see.

1.4 Selecting/Discarding Random Cards

Whenever a player randomly discards or selects a card from his hand, his opponent selects instead.

Since this action can happen multiple times, his opponent is always free to shuffle his hand.

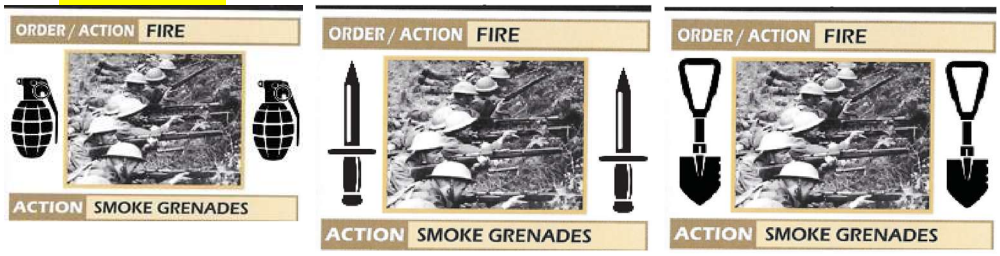

1.5 Reshuffle

During each Time Marker Advance, one player will be instructed to shuffle the cards occupying both his discard and draw piles together in order to form a new draw pile.

1.6 Orders

Orders are listed across the top of each Fate card. A player may only play a card for its order during his own turn, and may never announce more orders in a turn than his Order Limit. If a card is played for its order, it is immediately placed face-up atop that player's discard pile—the action on that card then could not be played until the next time it is drawn into the player's hand.

1.7 Reflex Icons

Reflex Icons are drawn on both sides of the photo on some Fate Cards. There are also Fate Cards that do not have Reflex Icons. When a player performs a Reflex, he randomly discards a card from his hand; if the discarded card has a Reflex icon that matches the type of Reflex he are performing, it grants an additional effect to that Reflex or a specific effect.
Fix Bayonets! Reflex matches Bayonet Reflex icons, Grenades! Reflex matches Hand Grenade Reflex icons, and Dig In! Reflex matches Entrenching Tool Reflex icons.
For a detailed explanation of Reflexes, see R51.

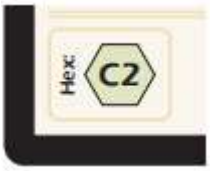

1.8 Actions

Actions are listed just below the photo on each Fate card or, in the case of Op Fire and Anti-aircraft Fire, across the top of the card. A player may play a card for its action at any time during either player's turn, so long as its prerequisite is met. If a card is played for its action, it is immediately placed face-up atop that player's discard pile—the order on that card then could not be played until the next time it is drawn into the player's hand.

1.9 Events

Events are listed below the action on every Fate card. Events are never played from the hand, voluntarily or otherwise—only off the top of the draw pile, and only at random intervals due to certain die rolls.

1.10 Random Hexes

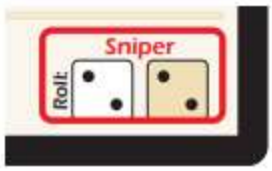

This is the light green "hex" in the lower left of each Fate card. Snipers and some events will call for a random hex to be determined and, if so, the top card of that player's Fate deck is revealed and only this "hex" is consulted. The letter/number combination within the "hex" will correspond to one specific hex on the map, where the Sniper/Event trigger will take place.
A Random Hex can also have an effect on any broken Weapons in play.

1.11 Die Rolls

This is the pair of six-sided dice graphically displayed in the lower right corner of every Fate card. "Real" dice are not used in CC:K: instead, whenever a "roll" is called for, that player reveals the top card of his draw pile and only the two dice are consulted; everything else on the card is ignored. When such a roll is made, the two dice are added together to arrive at a sum total (exception: during a Targeting roll, the dice are instead multiplied).

1.11.1 Die Triggers

Many die rolls are enclosed within a thick red box with the word Confusion, Event, Sniper or Time also inside it; these are called "triggers". These four triggers immediately and temporarily pause normal game play in order to perform a specific task. Normal game play resumes after the trigger has been dealt with in its entirety.

1.11.1.1 Non-Time Die Triggers on Last Fate Card

Any non-Time trigger that occurs via the last card of a player's draw pile will resolve immediately after a Time Marker Advance.

1.11.1.2 Die Triggers NA Within Triggers

Any roll made while resolving a trigger (such as the Reinforcements event that requires a roll on a Support Table; or a Sudden Death roll during a Time trigger) cannot itself produce a die trigger.
So, any die roll made during a trigger must ignore any Confusion, Event, Sniper or Time trigger associated with it.

1.11.1.3 Die Triggers and Timing

Each of the four triggers explained below are always performed in their entirety before any results of the die roll that triggered them are implemented.
So the roll itself locks in a result but that result is not physically implemented on the map until after the die trigger is resolved.
Example: A unit with a morale of 6 is shot at with a Fire Attack Total of 14. Its Fire Defense roll is 7-Event. That unit will break but not until after the Event trigger is performed. Even if the event were "Battle Harden" and the veteran marker was placed on that very same unit it will still break immediately after the event is concluded. Its increased morale from the veteran marker is not retroactively calculated (so it will end up a broken veteran).

1.11.2 Confusion Trigger

Whenever a player makes a die roll and that roll is surrounded by a red box with the word "Confusion" inside it, that player must increase his confusion level by 1.
Confusion means feeling stressed from not being able to keep up with the ever-changing situation on the battlefield.

1.11.3 Event Trigger

Whenever a player makes a die roll and that roll is surrounded by a red box with the word "Event" inside it, normal game play pauses in order to execute that event. The player making the roll reveals the top card of his draw pile and, ignoring everything else, reads aloud and then executes the event on that card.

Unless otherwise stated, any decisions required by an event are made by the player reading it.

1.11.4 Sniper Trigger

Whenever a player makes a die roll and that roll is surrounded by a red box with the word "Sniper" inside it, normal game play pauses in order to resolve that Sniper: The player rolling the Sniper trigger reveals the top card of his draw pile and, ignoring everything else, reads aloud the random hex on that card. That player may then select one unit in or adjacent to that hex and break it.

A Sniper result can represent a lot more than just a patient man with a scoped rifle, by the way: this mechanism could also represent combat occurrences such as friendly fire, panic, shell shock, snake bite, despair, dehydration, fatigue, a stray shell, concussion, dirt in the eye – you get the idea.

1.11.5 Time Trigger

Whenever a player makes a die roll and that roll is surrounded by a red box with the word "Time" inside it, normal game play pauses in order to perform a Time Marker Advance.

2. MAPS

2.1 The Battlefield

Superimposed over each mapboard is a hexgrid which is used to regulate movement and combat at an abstracted scale of about 30 meters per hex. Each hex contains:

a) a specific type of terrain which can affect movement as well as attacks made into or through it;

b) a white center dot used for determining Line of Sight between hexes;

c) a unique letter–number identifier – such as "C7" – used for determining where Snipers and certain events will take place.

2.2 Map Border

a) The upper right of each map contains its identification letter which is used to determine which map is used for a particular scenario.

b) In the lower left of each map is a sixsided "compass" matching the orientation of the mapboard hexes. The compass is generally used to determine a random direction during artillery strikes, as well as for various events.

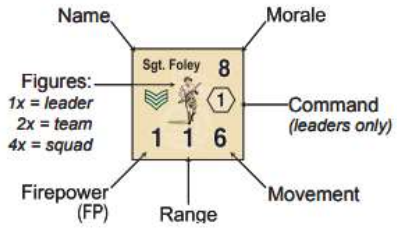

On the compass, 1 points to the "top" of the map; 4 to the bottom; 2 and 3 to the right side; 5 and 6 to the left.

In CC:K, you manage the Radio by placing it in the Artillery Box on the Track display.

2.3 Objectives

Each map contains five "objectives"— red circles containing a white number between 1 and 5. An objective is worth a variable number of VPs to the last side to have sole control over it. An objective's value is a default zero VPs unless dictated otherwise by the specific objective chits in play.

3. UNITS

Name/Rank– The name of any unit is used solely for identification purposes. Similarly, the historical rank insignia found on all Leaders is for aesthetic purposes only. These have no effect on actual game play.
Figures– All units have an illustration of one, two or four soldier figures to denote their relative size. One figure is a "leader" representing a single man; two figures a "team" of 3–6 men; and four figures is a "squad" of 8–13 men.

3.1 Unit Stats

Units have one number in their upper right corner and three numbers printed along the bottom, even if one or more are "0". Leader units (only) will also have a number, letter or dash centered along the right side of their counter.

3.1.1 Firepower (FP)

This is the first number along the bottom, and is a unit's base strength when in melee or when firing at an enemy unit.

3.1.2 Range

This is the second number along the bottom, and is the maximum number of hexes away at which it may use its FP to fire at enemy units.

3.1.3 Movement

This is the third number along the bottom, and gives the number of Movement Points ("MPs") a unit can spend to Move from hex to hex across the map.

3.1.4 Morale

This is the number in the upper right corner, and is a unit's base strength when defending against an enemy fire attack, or when attempting to Recover or Rout, among other things. A unit's Morale is always directly modified by the Cover of the hex it currently occupies.

3.1.5 Command

This is the number within a hex-shape along the right hand side of leader counters (only). Command serves to activate additional units during orders and Op Fire actions, as well as adding to the stats of certain other units and weapons stacked with the leader. See also Scouts.

3.1.6 Boxed Stats

Some units have their FP, Range and/or Movement enclosed within a square. With the exception of boxed FP giving +1 strength in Melee and boxed range allowing the player to randomly select

two cards from the opponent's hand when performing a Harass Order, boxed stats have no intrinsic meaning other than to allow certain Actions to be played for that unit.

3.2 Broken Units

3.2.1 Broken/Unbroken

A unit is always in one of two states: broken or unbroken. A unit usually begins a scenario face up on its unbroken side but Fire Attacks and other adverse effects can "break" it—causing it to be flipped to its broken side.
A broken unit is identified by having a red bar across the top of its counter.

3.2.2 Attached Markers

Units switching from broken to unbroken or vice versa retain possession of all weapon / veteran / suppressed markers.

3.2.3 Attached Weapons

Broken units cannot fire weapons. A weapon does not break or unbreak solely because its controlling unit does, and vice versa.

3.2.4 Elimination

A broken unit that breaks again is eliminated: award its VP value to the opponent after placing it on the Casualty Track.

3.2.5 Rallying

When a broken unit is instructed to "rally," it is flipped back to its unbroken side. This usually occurs due to a successful die roll during a Regroup Order or via various Events. Rallying has no effect on an unbroken unit.
With the exception of not being able to fire weapons, you will find that broken units can do most anything unbroken ones can, just not nearly as well.

3.3 Leaders

3.3.1 Command

3.3.1.1 Command Radius

Normally, an order or Op Fire action will only activate a single unit. When a leader with a command number is the first unit activated, however, it has the ability to further activate all, some or none of the friendly non-leader units within its "Command Radius" to perform the same order/Op Fire. Command Radius is counted in hexes radiating outward from that leader's hex.
A leader with "2" command can activate friendly units up to two hexes away – even across an impassable blaze or past an enemy unit. A leader with "1" command can activate friendly units in or adjacent to its own hex. A leader with "0" command can activate units in its own hex.

3.3.1.2 Unit Command

A leader's command number is added directly to the FP, range, movement and morale of all friendly squads and teams (only) as long as those units are in the same hex with the leader—whether the leader is activated or not. This effect is cumulative if two or more leaders occupy the same hex.

It may be clear by now that leaders can never affect themselves or other leaders.

3.3.1.3 Weapon Command

A leader's command number is added directly to the FP and range of every non-ordnance weapon being carried by a friendly squad or team as long as that unit is in the same hex as the leader—whether the leader is activated or not. This effect is cumulative if two or more leaders occupy the same hex.

So a mortar, being ordnance, can't have its stats affected by a leader; and an MG carried by a leader won't have its stats increased.

3.3.2 Heroes

Heroes can enter play via the Hero events. Heroes are normal leaders in every respect, with two exceptions:

a) A Hero never earns its owner Exit VPs nor does the opponent ever gain VPs for its elimination. An exited/eliminated Hero is always put back in the countermix, never onto the Casualty Track.

b) As an exception to rule O18.2, a Hero may be activated more than once per turn, thus allowing it to perform more than one order or Op Fire per turn.

Heroes enjoy running full speed up an open road towards an objective hex. They also love to charge machine gun nests in order to take them out in close combat. Other useful tasks for heroes will no doubt be discovered by the player well versed in Hollywood war movies.

3.3.3 Scouts

Scouts are normal leaders in every respect, with two exceptions:

a) Independent—Having no actual command number, a Scout cannot increase the stats of friendly units and weapons it is stacked with, nor can it activate other friendly units in the same manner as other leaders.

b) Mortar Spotting—The "M" command of an unbroken Scout represents its ability to activate and then to possibly spot for friendly mortars anywhere on the map.

c) Command Number—There is no Scout's Command Number, but it is considered 0 when calculating the Victory Point Value or when activated in SITREP Order.

3.3.4 Leaders & Weapons

A leader may only ever possess a weapon lacking a negative movement modifier.

4. UNIT MARKERS

4.1 Veteran

4.1.1 Placement

A veteran marker can be placed on a unit via the Battle Harden events.

4.1.2 Effects
A unit with a veteran marker on it has +1 FP, +1 range, +1 movement and +1 morale.
Command is unaffected by veteran status.

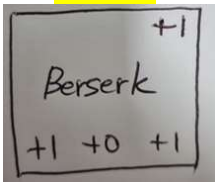

4.1.3 Removal
A veteran marker remains on a unit until the unit is eliminated or exits the map. A veteran squad that Deploys transfers its veteran status to only one of the two replacing teams.

4.2 Suppressed

4.2.1 Placement
A suppressed marker can be placed on a unit via the Interdiction or Suppressing Fire events, or due to a tie result during a Fire Defense roll.

4.2.2 Effects
A unit with a suppressed marker on it has −1 FP, −1 range, −1 movement and −1 morale.
Command is unaffected by being suppressed.
Weapons themselves cannot become suppressed, but a suppressed unit cannot fire any weapon it possesses.

4.2.3 Removal
A suppressed marker can only be removed from a unit during a Regroup order, or if the unit is eliminated or exits the map. A suppressed squad that Deploys transfers its suppressed status to only one of the two replacing teams.

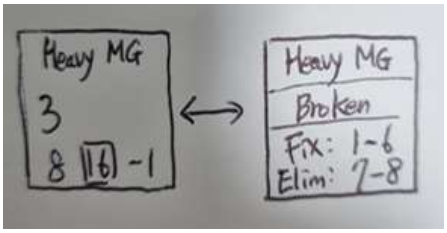

4.3 Berserk

4.3.1 Placement
A berserk marker can be placed on a non-veteran unit via Adrenaline events.

4.3.2 Effects
When a berserk marker is placed on a non-veteran unit, if there is a suppress marker on that unit, the suppress marker is removed.
A unit with a berserk marker on it has +1 FP, +1 movement and +1 morale.
A veteran marker or suppress marker cannot be placed on a unit with a berserk marker.
A unit with a berserk marker would break, eliminate that unit instead.

4.3.3 Removal
A berserk marker remains on a unit until the unit is eliminated or exits the map. A berserk squad that Deploys transfers its berserk status to only one of the two replacing teams.

5. WEAPONS
5.1 Effects

As with units, weapons have both FP and range stats; and possibly a negative modifier (in bold red, like in the sample above) to the possessing unit's movement. Also, they have a jam value in the center left corner. The jam value can be a specific number, or any number (A; ALL). Certain weapons do not have a jam value. Whenever a player makes a Fire Attack Roll (only; no other roll including Targeting), if the roll is exactly equal to the firing weapon's jam value the weapon becomes broken. Whenever a unit is activated, any weapon it possesses is activated along with it. Only an unbroken, unsuppressed unit may fire its weapon, and may do so either separately or as part of a Fire Group.

During testing we found it helpful to turn weapons 90° while their owning unit was broken as a reminder not to fire them. Placing a unit's suppressed marker directly atop its weapon is another such reminder.

A jam value does not simply mean that the weapon is broken. It could be that the weapon is being reloaded, that the muzzle is overheating and cooling down, that ammunition is jammed, or that sand or other debris has entered and caused a malfunction. It could also mean that the weapon is low on ammunition.

Weapons with the same name may have different jam values, but the probability of getting the same total when rolling two dice is the same. For example, jam values could be 2 and 12, 3 and 11, or 4 and 10 etc.

A Weapon with a jam value of A breaks the Fire Attack Roll regardless of the number rolled. Here, A stands for ALL.

5.2 Portage

A squad or team may possess any one allotted weapon. A leader may only ever possess a weapon without a printed negative movement modifier. "Possessing" a weapon is denoted by having the weapon physically placed atop that unit. Any weapon acquired via that nation's Support Table must be given to the unit listed with that weapon.

Weapons fit comfortably on a unit counter when offset a bit up and to the left. This leaves all the unit's stats clearly visible.

5.3 Removal & Transfer

A Weapon may be transferred to another unit via the expenditure of 1 MP during a Move Order.
A Weapon may be voluntarily eliminated by its current owner at any time.
If a unit with a Weapon is eliminated or exits the map, the Weapon goes with it. A Weapon being carried by a Squad that Deploy is given to one of the two replacing Teams.

5.4 Broken Weapons

When a Weapon breaks, it is flipped over to its "Broken" side. A broken Weapon that breaks again is eliminated.
Whenever a player checks for a Random Hex – either via Sniper! or due to certain Events – the hex number is compared to that on every broken Weapon in play. This happens before the result of the Event/Sniper itself is implemented.
– If the number falls within that Weapon's "Fix" range, it is flipped back over to its unbroken side, available for immediate use.
– If the number falls within that Weapon's "Elim" range, it is eliminated and placed in the "Weapon" space of the Casualty Track.

– Otherwise, the Weapon remains broken.

5.5 Ordnance

Some weapons – those with a white bar behind their stats, like the two pictured in the next rule – are termed "Ordnance" and must first secure a hit before making a Fire Attack roll. Ordnance is also prohibited from participating in a Fire Group, performing Op Fire and having its stats increased via command.

5.6 Specialized Weapons

A flamethrower automatically sets its target's Cover to "0", with no modifications possible.

A mortar is an indirect fire weapon. When a mortar fires, if it was activated by a Scout, the LOS may be traced from that Scout (acting as a spotter) rather than from the mortar's own hex.

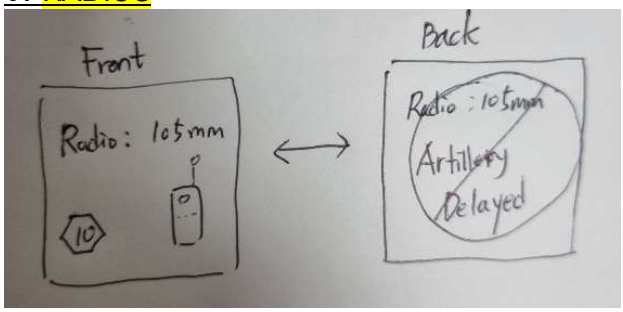

A Satchel Charge is a one-use Weapon and as such must be eliminated immediately after it makes a Fire Attack Roll.

An AT Rifle is a normal ordnance in every respect, with one exception:
Sniping – When making a fire attack, an AT Rifle
- must, if it hits, multiply the two dice on its Fire Attack roll (rather than adding them together as for a normal fire attack); and
- will only affect a single unit in the targeted hex (rather than everyone in the hex having to make Defense rolls as with a normal fire attack). If more than one enemy unit occupies the targeted hex the Active player selects the unit to be affected, through a broken unit cannot be selected if an unbroken unit is present–the latter must be chosen if possible.

The circle behind the AT Rifle's FP serves as a visual reminder of these special abilities.

6. RADIOS

Radios are markers representing off-map artillery batteries. Each has a FP of between 8 and 14. Each player may have only one radio in play at a time. A radio is not a weapon.

At the start of the scenario, both players secretly bid for a radio. At this point, players choose either an Artillery Denied marker or one of the available Radio markers from the scenario year and simultaneously reveal them. Each player then pays the VP value corresponding to the chosen marker, referring to the Radio Table, and places it in the desired Round Space of the Artillery Box with the radio side up.
Players who choose the Artillery Denied Marker will no longer be able to play Artillery Request Orders. Place it in the Artillery Denied space of the Artillery Box.
All radios are marked "Artillery Delayed" on their backs, and can be flipped to the "Artillery Delayed" side by Ammo Change of Artillery Request Order, striking further afield of Air Support Order, or triggering an Artillery Delayed Event.
See Artillery Request order for rules on radio usage.

US Radio	1950	1951	1952	1953
Artillery Denied - 0VP	O	O	O	O
81mm(9FP) - 6VP	O	O	O	O
105mm(10FP) - 7VP	O	O	X	X
155mm(12FP) - 9VP	O	O	O	O
203mm(13FP) - 10VP	X	X	O	O
240mm(14FP) - 11VP	X	X	X	O

ROK's Radio	1950	1951	1952	1953
Artillery Denied - 0VP	O	O	O	O
75mm(8FP) - 5VP	O	O	X	X
81mm(9FP) - 6VP	O	O	O	O
105mm(10FP) - 7VP	O	O	O	O
155mm(12FP) - 9VP	X	X	O	O

KPA's Radio	1950	1951	1952	1953
Artillery Denied - 0VP	O	O	O	O
76mm(8FP) - 5VP	O	O	O	O
82mm(9FP) - 6VP	O	O	O	O
120mm(10FP) - 7VP	O	O	O	O
122mm(11FP) - 8VP	O	O	O	O

7. STARSHELLS

Starshells are markers representing various types of parachuted illumination rounds or illuminated mines used during night actions.

7.1 Placement

A starshell is placed on the map via the Artillery Request order or Hidden Trap action.

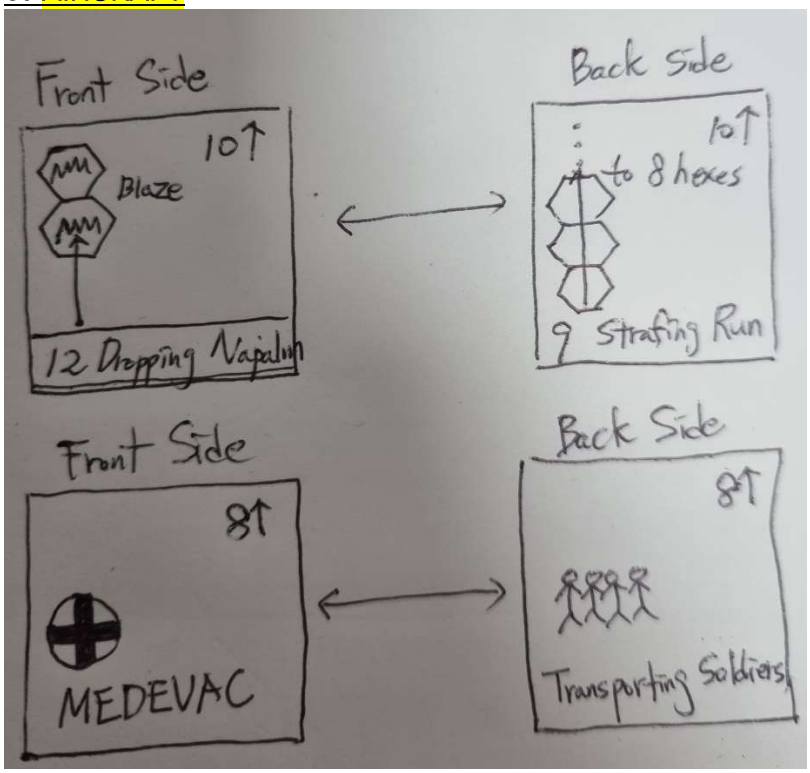

7.2 Effects

A starshell “illuminates” its own hex as well as every hex within 2 hexes of it. The Night Hindrance is ignored in its entirety if the target hex is illuminated. The illumination status of a hex from which the fire attack emanates or of any intervening hexes is irrelevant.

7.3 Removal

A starshell can be removed from the map with a Disperse effect or Time Marker Advance Procedure..

8. AIRCRAFT

Helicopter, and fighter markers are collectively referred to as "aircraft" and represent transport, rescue, and various forms of close air support available to combatants. An aircraft is not a weapon.

8.1 Placement

Aircraft(Fighter and Helicopter) are placed on the map via play of an Air Support order.

8.2 Effects

Aircraft(Fighter and Helicopter) can be activated to rescue, transport, or attack via play of an Air Support order.

8.3 Removal

Aircraft(Fighter and Helicopter) are removed from the map via an Anti Aircraft Fire, or completion of a Dropping Napalm, Strafing Run, Aerial Medical Evacuation, or Transporting Soldiers.

9. INITIATIVE CARD

Each scenario will indicate which player begins the game in possession of the Initiative card.

IMPORTANT: The Initiative card is never part of a player's hand (only Fate cards). The Initiative card should simply be kept face up in front of the owning player for ease of reference during play.

9.1 Re-Roll

At any time during the game, the player currently in control of the Initiative card may choose to cancel all effects of the last die roll to have been made – including any die trigger associated with it – and cause it to be re-rolled. This decision must be made prior to any trigger/results of that roll being implemented.

When a player calls for a re-roll in this manner, he must give the Initiative card to his opponent and then the re-roll is performed. The opponent will then control the Initiative card unless and until he himself performs a re-roll option, thus passing it back to the first player. This use of the Initiative can occur an unlimited number of times during the game—even during the same series of die rolls.

9.2 Tie Game

When a scenario ends in a tie – for example, 0 VPs after sudden death, or both players having their last on-map unit eliminated simultaneously – the player holding the Initiative card breaks the tie and wins the game.

The Initiative card thus acts as a sort of balancing mechanism to temper those wild strings of luck inherent in any game with cards or dice. Initiative will generally pass back and forth between the two players as the fortunes of war play out, though this isn't mandatory—it is possible, however unlikely, that a player could refrain from using it throughout an entire game.

10. THE TRACK DISPLAY

The Track Display is the reception point for many of the game's functions. It is home to various tracks and such that players will utilize throughout a scenario.

10.1 Victory Track

10.1.1 VP Marker

The VP marker is placed on the Victory Track at the beginning of every scenario, and will move back and forth along the track – that is, towards and away from each player – as VPs are gained and lost during play. The reverse side of the VP marker is used to record VP totals greater than 20.

10.1.2 Attack Total Marker

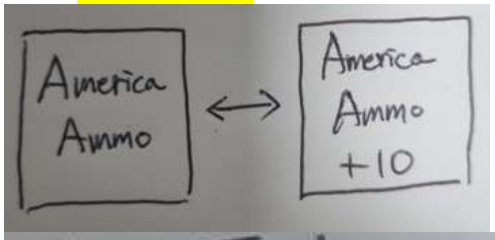

This marker is used solely as a mnemonic device for players to temporarily record the current strength of any Fire Attack / Mine Attack / Artillery Impact / Melee Total / etc. This is helpful for when the targeted player's Defense rolls are interrupted by die triggers.

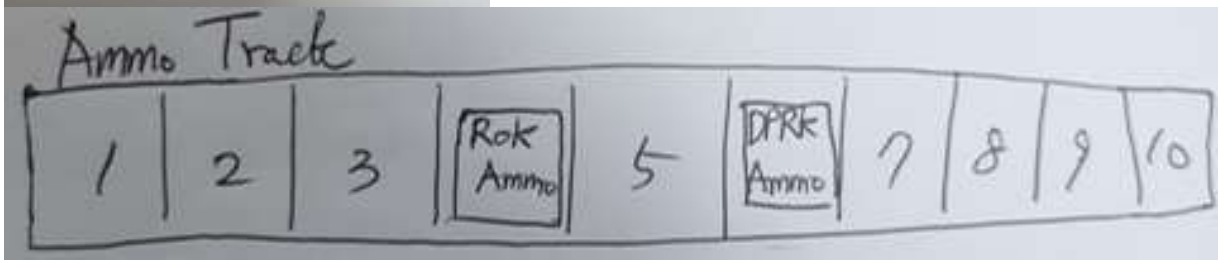

10.2 Casualty Track

Each scenario will instruct the players as to which spaces of the Casualty Track to place their sides' Surrender markers. The Casualty Track has an upper and a lower row, each one "pointing" to the player that will use it.
Whenever a non-Hero unit is eliminated, it (and its possessed Weapon, if any) is placed on the Casualty Track. Weapons are placed in the large central box. Units are stacked one per numbered space on their owner's side of the Weapons Box, occupying those spaces in lowest-to-highest numerical order. In this manner, a player will lose the game if one of his eliminated units is placed in the space occupied by his side's Surrender marker.
Remember to gain victory points each time an opponent's unit is eliminated.

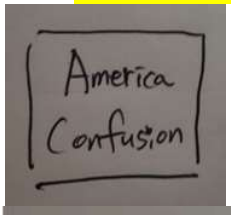

11.3 Ammo Track

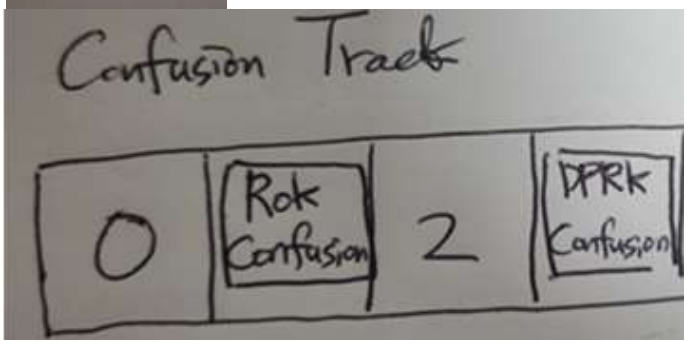

Each nation's Ammo marker is placed on the Ammo Track at the beginning of every scenario, and will move back and forth along the track as Ammo is added and deducted during play. The reverse side of the Ammo marker is used to record Ammo totals greater than 10.
Each nation can only have a maximum of 20 ammo.
As with all wars, the Korean War was particularly notable for its artillery fire. In CC:K, players can purchase radios by paying victory points, and as long as they have ammo, they can call for artillery fire.

10.4 Confusion Track

Each nation's Confusion marker is placed on space 0 of the Confusion Track at the start of the scenario unless otherwise instructed, and will move up and down along the track as Confusion is increased and decreased during play.

The space on the Confusion track where each nation's Confusion marker currently resides is called that nation's Confusion level.
Confusion level cannot exceed 3.
As we move from ancient times to modern times, war evolves into an increasingly dynamic form. I wanted to express that it is not strange if the mentality of a commander who has to remember and execute more and more information and tactics breaks down at any time.

10.5 Miscellaneous

1) OB Display

Each faction has an OB stats marker which is used on the OB Display to mark its
- quality (elite, line or green)
- Order Limit (1-6)
- and Posture (Attack, Defend, Straggle, Invade or Recon).

"Quality" tells the player which of his Teams – Elite, Line or Green – will replace any of his Squads that break down. "Order Limit" is the maximum number of orders that player may give each turn. "Posture" assigns that player a maximum hand size as well as other possible effects.

2) Scenario Date

Every scenario will specify which space of the Year Track in which to place the year marker.

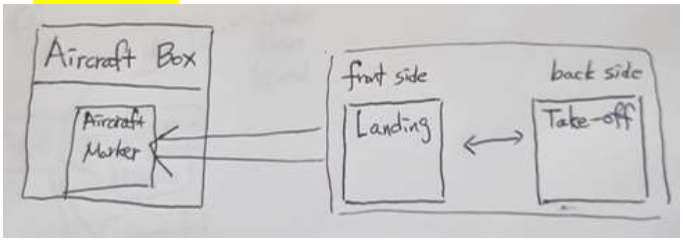

3) Objective Box

Place drawn and scenario-assigned objective chits here. Players place their "secret" objectives in the section of the box closest to them. "Open" objectives are placed in the central section.

4) Data Boxes

The seven Data Boxes along the bottom of the Track Display allow players quick access to special rules associated with various fortifications and weapons. The Mines box has an additional small flyout used to indicate the strength of all mine attacks for the scenario being played.

5) Aircraft Box

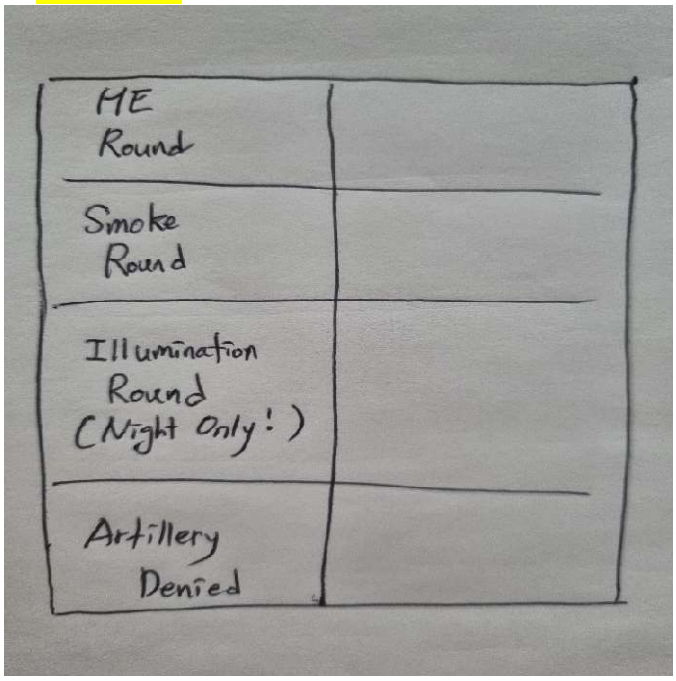

Scenarios generally instruct in one of three ways. If None, do not place the aircraft(status) marker in the Aircraft Box. If Landing, place the aircraft(status) marker in the Aircraft Box on the Landing Side. If Take-off, place the aircraft(status) marker in the Aircraft Box on the Take-off Side.

When a player performs an Air Support order while the aircraft(status) marker is on the landing side, the aircraft(status) marker will flip to the take-off side. When the player performs an Air Support order while the aircraft(status) marker is on the take-off side, the aircraft(status) marker will flip to the landing side after performing one of the air support activities. An Air Support Order cannot be played if the aircraft(status) marker is not in the Aircraft Box.

The North Korean Air Force was annihilated by the US Air Force in less than a week since the start of the war. Therefore, the Aircraft Box only interacts with the UN forces, including the US, and the ROK.
When the aircraft(status) marker flips to the take-off side, it doesn't actually indicate takeoff. Think of it as simply letting you know that it's coming soon.

6) Artillery Box

At the start of each scenario, the player who chose the Radio places it Radio-side in the desired Round space of the Artillery Box.
When the player performs the "Ammo Change" function of the Artillery Request Order, he moves his Radio marker to Artillery Box's another Round space and flips it to the Artillery Delayed side. (Note that the Illumination Round Space can only contain the Radio Marker in scenarios with the Night Rule applied. Note that the Smoke Round Space cannot contain the Radio Marker in scenarios with the Night Rule applied.)
When the player performs the "Striking Further Afield" function of the Air Support Order, his opponent's Radio marker is flipped to the back side of the Artillery Delayed box without moving.
When the player performs the "Artillery Delayed Event," a Radio marker is flipped to the back side of the Artillery Delayed box without moving.

CORE RULES-MECHANICS

11. SEQUENCE OF PLAY

A game of CC:K begins with one player (as specified by the scenario being played) performing the first “turn”. When he is finished – and draws up to his hand size – the opposing player takes his first turn. These turns are then alternated until a Sudden Death roll or other occurrence ends the game.
A turn consists of a player choosing to either:
a) perform one or more orders by playing cards from his hand; or
b) Adjust his Confusion level to 0. In a Day scenario, he may elect to discard any number of cards (even zero) up to his assigned Discard Limit. In a Night Scenario, he must discard either one card or all cards.

11.1 Order Limit

In CC:K, no player may give an order without the play of a card from his hand(exception: Rout). The maximum number of orders a player may perform each turn – his "Order Limit" – will be given within the scenario being played. If a player's Confusion level is 0, he may perform as many Orders as he wants within his Order Limit, but if his Confusion level is 1 or higher, he must perform Orders unconditionally until he fills his Order Limit or his Confusion level becomes 0. Orders do not need to be predesignated—they are played from the hand, then executed, one at a time. A player may observe the results of one order before deciding whether to play another. The different orders that may be given by a player are explained in rules Orders.

11.2 Action Capability

As with orders, no player may announce an action without the play of a card from his hand. Players may perform actions whenever they deem appropriate provided the prerequisite, if any, within the action itself is met. There is no limit to the number of actions a player may perform during either player's turn other than the number of cards in hand.
The different actions that may be taken by a player are explained in rules Actions.

11.3 Discard Limit

If night rules are not in effect and if a player elects to perform no orders in his turn, he may instead discard any number of cards up to but not exceeding the Discard Limit of the nation he is commanding:
- 5 if commanding the US;
- 3 if commanding the ROK, or KPA;

Additionally, the Discard Limit of the nation is also affected by Troop Quality if night rules are not in effect.
- Discard Limit of the Nation – 1 if Troop Quality is Green;
- Discard Limit of the Nation + 0 if Troop Quality is Line;
- Discard Limit of the Nation + 1 if Troop Quality is Elite;

If the US player's troop quality is Green, his discard limit is 4.

If night rules are in effect, he must discard ONE or ALL cards in his hand, regardless of which nation he commands.

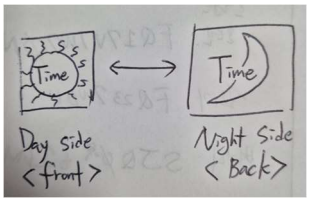

11.4 Hand Refill

At the end of every turn, the active player (only) must draw enough Fate cards off the top of his draw pile so that the number of cards in his hand equals his hand size. This draw may be temporarily interrupted by a Time Marker Advance if the last card of that player's deck is drawn—in this case, the hand refill recommences after the Time Marker Advance is concluded (during which his discard pile was reshuffled to form a new face-down draw pile).

12. GAME TIME

12.1 Time Marker

12.1.1 Placement

Each Scenario will indicate on which space of the Time Track (located on the Track Display) the time marker is to be placed (usually "0"). For each scenario, explain whether the situation takes place during the Day or the Night. If it is specified as Night, place the Time Marker on the Night Side of the Time Track; if it is specified as Day, place the Time Marker on the Day Side.

12.1.2 Advancement

The time marker is advanced one space forward along the Time Track whenever:
– a Time trigger is rolled (and the roll is not cancelled by the player with the Initiative);
– or a player's draw pile has no cards remaining: treat such an occurrence exactly as if a Time trigger had been revealed.
It is only advanced once – not twice – if the last card in a player's deck is revealed for a die roll resulting in an actual Time trigger.
Immediately after advancing the time marker, normal play pauses so that the following two steps may be executed in the order shown:
a) the player triggering the Time Advance (only) shuffles his deck and discard pile together to form a new draw pile;
b) the triggering player makes a Sudden Death roll if appropriate. Then, if the game did not end due to sudden death, perform the following six steps:
c) the scenario Straggler (only) increases his confusion level by 1.
d) the scenario Defender (only) gains 1 VP;
e) the triggering player (only) must remove any one Smoke marker and one Starshell marker from the map;
f) if there are one or more pieces in the space now occupied by the time marker, the owning player brings them into play as reinforcements by placing them in any hexes along his friendly map edge (inactive player first).
g) flip all Radio markers placed with the Artillery Delayed side inside the Artillery Box to the front side.
h) both players may play "Dig In!" Reflex.
In CC:K, the Dig In Action was removed, but Dig In!, which felt very similar, was added. Dig In! is a type of Reflex(see R51).

Once the eight steps above have been completed in their entirety, normal play resumes from wherever it left off.

12.2 Sudden Death Marker

12.2.1 Placement

Each scenario will indicate on which space of the Time Track the sudden death marker is to be placed.

12.2.2 Procedure

Whenever the time marker advances into or beyond the space occupied by the sudden death marker, the triggering player must make a roll—this is done after that player shuffles his Fate deck and discard pile together to form a new draw pile. If the result is less than the number in the space currently occupied by the time marker (not the sudden death marker), the game immediately ends. Otherwise, play proceeds as normal.

12.3 Game End

A game of CC:K will end in one of four ways:

a) A player is forced to place one of his eliminated units in the space of the Casualty Track occupied by his Surrender marker OR vice versa;
b) A player's last remaining unit on the map is eliminated(exception : a Straggler's last remaining unit);
c) A player's last remaining unit on the map voluntarily exits the map;
d) A Sudden Death Roll is made that is less than the number in the space currently occupied by the Time marker.

12.3.1 Game End via Elimination

If the above situation a) or b) occurs, that player immediately and automatically loses the game regardless of the VP total. If both players simultaneously lose in this manner, the player holding the Initiative card breaks the tie and wins the game. (Exception : When a Straggler's last remaining unit remaining on the map is eliminated, then the player with the higher VP total – that is, the VP marker is on his side of the zero space – wins the game.)

12.3.2 Game End via Exit or Time

If the above situation c) or d) occurs and situations a) and b) do not apply, players must reveal any secret objective chits and award their VPs to the current controller. Then, the player with the higher VP total – that is, the VP marker is on his side of the zero space – wins the game. If the VP marker is in the zero space, the player holding the Initiative card breaks the tie and wins the game.

13. VICTORY CONDITIONS

A player will usually win the game by having more VPs than his opponent when the game ends. VPs are earned in one of three ways:
– Elimination of enemy units;
– Exiting of friendly units off the opponent's map edge;
– control of mapboard objectives.

13.1 Elimination Victory Points

When a unit is eliminated – for any reason: via order, action or trigger – the opponent is awarded a certain number of VPs for it:
– A squad is worth 2 VPs;
– A team is worth 1 VP;
– A leader (exception: Hero) is worth 1 VP plus 1 VP for each point of command on its unbroken side; – A Hero is worth no VPs.

13.2 Exit Victory Points

13.2.1 Map Edges & Exit Points

Each map is considered to have an impenetrable barrier to the left and right side of each player once play commences. A unit may never exit the map off the right or left flank. However, the edge of the map nearest a player's opponent – the "enemy" map edge – can be exited by friendly units in play (only) but only from a hex containing an Exit Point, as if the map's colored border was another hex. Conversely, the edge of the map nearest a player – his "friendly" map edge – can be exited by enemy units (only) via those hexes containing Exit Points.

13.2.2 Voluntary Exit

A unit activated to Advance or Move may exit off the opponent's map edge (at a MP cost of 1) if the hex it is leaving contains an Exit Point, regardless of that Exit Point's value. Each unit exited in this way immediately earns its owning player a number of VPs equal to the value given within the Exit Point itself.

Note that, when in play, objective chit "Y" increases the value of each Exit Point by 1.
Exited units are placed on any space of the Time Track the owning player wishes (though the very next space is most common). Exited units are always placed on the Time Track unbroken, even if broken while exiting. Exited units retain possession of carried weapons – again automatically unbroken – but lose any veteran, berserked, or suppressed markers attached.
When a player's unit in Straggler Posture exits, instead of placing it on the Time Track, return it to the countermix. Then, he moves the opponent Surrender marker into the next lower space on the opponent's side of the Casualty Track.

13.3 Objective Victory Points

Each of the five objectives on every map can be worth one or more VPs, depending on which objective chits are in play. Objectives are worth zero VPs by default: only one or more objective chits can make them worth more.

13.3.1 Control of Objectives

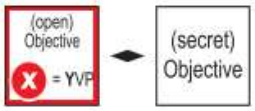

The double-sided control markers are used to indicate which side currently controls each mapboard objective.
During setup, a scenario will specify which objectives begin under each player's control. In some cases, objectives may begin the game uncontrolled by either side: these should not contain any control marker. Otherwise, once play commences, the last player to have solely occupied an objective with a friendly unit should place/flip the control marker within that objective to match the faction he is commanding.

13.3.2 Building Objectives

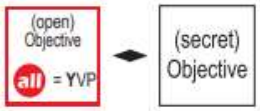

An objective located in a building hex is considered to represent the entirety of that building. In such a case, every hex of that building must be devoid of enemy units in order for an occupying player to take control of it.

13.3.3 Objective Chits

The number and composition of Objective Chits in CC:K and CC:P are the same.
There are 21 objective markers – or "chits" – in CC:K. Objective chits are usually drawn at random and are used to determine specific additional victory conditions for each scenario—usually in the form of assigning a VP value to one or more mapboard objectives.
Each objective chit drawn will show a victory condition on its "open" side. Most of these will be in the form of:

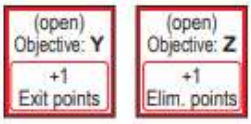

Showing that objective X is worth Y VPs to its controller. These values are cumulative with other objective chits.
If all three chits were in play for mapboard objective 3 (C, G and K), objective 3 would be worth a total of 6 VPs (1 + 2 + 3).
Several objective chits show:

This means that the five objectives on the map are worth Y VPs each. These values are cumulative with other objective chits.

Play hint—Due to the random assignment of objective chits in many scenarios, some mapboard objectives may be worthless at the end of the game. Players should still try to take control of all objectives on a map in case the opponent's secret objective chit includes one or more valuable ones.

The two specialized objective chits labeled

indicate, respectively, that:

- VPs gained for the voluntary exit of each friendly unit is increased by one for both players;
- VPs gained for the elimination of each enemy unit is increased by one for both players.

13.3.4 Open & Secret Objectives

Open objective chits – as well as secret ones that have been revealed during play – should be placed with their "open" sides face up in the center of the Objective Box. Secret objective chits should be kept face down in the Objective Box—only that player may look at the "open" underside of the chit.

Note that a few of the objective chits have no "secret" side—if a player draws one of these as their random objective chit, tough luck: it must be revealed as an open objective chit.

Open objective chits award their VPs immediately during play of the game, whereas secret objective chits usually award their points at game end (or at the time they are revealed).

When a mapboard objective with a matching open objective chit changes ownership during play, remember to first subtract its VP value from its former controller before adding its value to the new controller's victory points. An objective worth 4 VPs, for example, would cause an eight point swing when it changes hands.

13.3.5 Blaze in Objectives

If blaze occupies the objective hex, the objectives become uncontrolled by either side. If an objective spans multiple hexes (building objectives for example), all of those hexes must have a blaze marker for the objective to be uncontrolled by either side.

14. STACKING

Placing more than one unit or marker in the same hex is called "stacking".

CC:K's oversized hexes allow for up to four unit counters to sit comfortably within them. Even though these pieces may not physically be stacked upon one another, they are considered to be "stacked together" in a single hex for game purposes.

14.1 Marker Stacking

Stacking limits for markers are enforced immediately after placement. There is no limit to the number of markers that might occupy a single location except as follows.

14.1.1 Unit Markers

Each unit in play may have a maximum of one of each of the following markers stacked upon it:

- suppressed
- veteran
- weapon
  - a squad/team may possess any weapon
  - a leader may possess only those weapons without a negative movement modifier

A berserk marker can also be stacked on each unit at most once, but it cannot be stacked on a unit that has a veteran marker. If a suppressed marker is already stacked on a unit when a

berserk marker is about to be stacked, the suppressed marker is immediately removed. Also, if a berserk marker is stacked, a veteran or suppressed marker cannot be stacked.

14.1.2 Radios
Only one Radio may be stacked in each of the Artillery Box in Track Display : one per player. The first such Radio takes precedence.

14.1.3 Fortifications
Only one fortification marker can be stacked in each hex. The first such fortification takes precedence.
So if an event instructed you to place a foxholes marker into a hex already containing wire, those foxholes would not be placed.

14.1.4 Smoke
Only one smoke marker can be stacked in each hex. The one with the largest Hindrance takes precedence.

14.1.5 Blaze
Only one blaze marker can be stacked in each hex. While a blaze occupies a hex, no unit and no marker listed above may exist there.

14.2 Unit Stacking
14.2.1 Stacking Limit
The number of units – friendly and enemy – that can stack in a hex without penalty is based upon the number of soldier figures on those counters. A hex can contain units sporting a total of up to 7 soldier figures without penalty. Any hex containing units with a total of 8 or more soldier figures is in violation of the stacking limit and is considered "overstacked".
Note that all squads have 4 figures, all teams 2 figures, and all leaders 1 figure. In this manner, up to one of each could stack without penalty; or three teams and one leader; etc. Anything more than this in a single hex – four teams, for example – would be considered overstacked.

14.2.2 Overstacking Penalty
In any hex which is overstacked – that is, there are units present sporting 8 or more soldier figures – Cover in that hex is reduced by one for each soldier figure present above 7.
Two US squads with printed morales of 7 are stacked in a Rice Paddy(Wet) hex. Since the hex is overstacked by one soldier figure, the nominal 1 Cover afforded by the Rice Paddy(Wet) instead drops to 0. If a third US squad was stacked there (12 total soldier figures, or 5 figures over the stacking limit) the Cover of the hex would instead be -4 (negative four), causing each squad's morale to drop to 3!

14.2.3 Stacking During Setup
Players cannot exceed the unit stacking limit during initial scenario setup. Overstacking is allowed only any time after play begins.

15. LINE OF SIGHT (LOS)
15.1 LOS Checks
Generally, a unit in one hex must be able to see a unit in another hex in order to fire at it. Mapboard terrain can affect this LOS. A LOS "check" is made by stretching a string taut between the center dot within the "sighting unit's" hex and the center dot of the "target unit's" hex. If the string touches the physical depiction of a terrain Obstacle or Hindrance in an

intervening hex, that LOS is blocked or hindered, respectively. Such a LOS check may be made at any time by either player
An Obstacle or Hindrance that is within the sighting or target hex will not affect LOS. (exception: smoke).
LOS is always reciprocal: if unit A can see unit B, then unit B can also see unit A.
Units – friendly or enemy – in an intervening hex do not block or hinder LOS in any way.

15.2 Obstacles & LOS

15.2.1 Terrain Obstacles

Any terrain with the "X" symbol in its LOS column of the Terrain Chart is termed an "Obstacle". A unit in one hex can't see a unit in another hex if that LOS is blocked by an Obstacle.

15.2.2 Blaze Obstacles

A blaze marker is considered to fill the entirety of the hex that it occupies. In other words, a LOS traced through any portion of a Blazing hex – including directly along its hexside – is blocked by that marker.

15.3 Hindrances & LOS

Some terrain is too sparse or too low to be considered a complete obstacle to LOS, and is thus termed a "Hindrance" because it hinders fire traced through it to another hex rather than preventing the shot altogether.

15.3.1 Targeting & Hindrances

Any Accuracy or Targeting LOS traced through an intervening Hindrance will have its roll decreased by an amount equal to the number listed in that terrain's LOS column of the Terrain Chart. If the firing piece hits, any subsequent Artillery Impact/Fire Attack roll will be unaffected by the Hindrance.
The hindrance was already taken into account by lessening the chances of hitting the intended target in the first place.

15.3.2 Fire Attacks & Hindrances

15.3.2.1 Firepower Reduction

Any non-ordnance Fire Attack traced through an intervening Hindrance will have its FP reduced by an amount equal to the number listed in that terrain's LOS column of the Terrain Chart.

15.3.2.2 Minimum Firepower

A Fire Attack that would be reduced to 0 or less FP due to Hindrance cannot be made. A final FP of at least 1 is required for any Fire Attack roll to be made. Actions that increase a Fire Attack's strength may be used in order to raise that shot's FP to 1 or more.

15.3.3 Hindrance Modifiers

Hindrances are not cumulative: the single largest modifier is used, and this modifier does not become greater if the number of Hindrances between the sighting and target hexes is greater than one.
A squad fires at a team three hexes away. Both hexes between them contain grass. The team's total FP is reduced by -3 for one grass Hindrance, not -6 for both. If one or both of the two intervening hexes contained a "4" smoke marker, the FP would be reduced by -4 instead for the smoke.

15.3.4 Smoke Hindrances

A smoke marker is considered to fill the entirety of the hex that it occupies. In other words, a LOS traced through any portion of a smoked hex – including directly along its hexside – is hindered by that marker.
The physical placement of a smoke/blaze marker within a hex is unimportant: these are "inherent" terrain, and are considered to affect the entire hex – including all six hexsides – as long as they remain.
Furthermore, smoke hinders any LOS traced into or out of it, not just through it like printed mapboard Hindrances.

16. POSTURE

Each player's "Posture" will be assigned within the scenario being played. Posture serves to determine a player's hand size for the duration of the scenario as well as sometimes assigning certain special rules. The five possible Postures are:
- Attacker
- Defender
- Straggler
- Invader
- Recon

Hand sizes for the various Postures are shown on the player aid sheet for ease of reference during play.

16.1 Attacker Posture

A player assigned the Posture of "Attacker"
a) has a hand size of 6.

16.2 Defender Posture

A player assigned the Posture of "Defender"
a) has a hand size of 4;
b) is able to play several actions unavailable to other Postures;
c) gains 1 VP during each Time Marker Advance;

16.3 Straggler Posture

A player assigned the Posture of "Straggler"
a) has a hand size of 4;
b) increases his confusion level by 1 when the time marker advances;
c) Whenever a unit they control voluntarily Exits the map, instead of placing that unit on the Time Track, return it to countermix and decreasing the opponent's Surrender marker by 1;
d) When a last unit he controls remaining on the map is eliminated, scoring continues without automatic defeat.
This Posture is usually taken by those who are making a quick retreat to avoid being surrounded by enemies trying to cut off their retreat route.

16.4 Invader Posture

A player assigned the Posture of “Invader”
a) has a hand size of 7;
b) usually sets up at least half of his assigned forces as reinforcements on the Time Track rather than on-map;
This Posture is generally reserved for those scenarios where one side – the Invading side – is conducting a river crossing or seaborne amphibious invasion. An invader’s friendly map edge will more times than not consist of nothing other than water barrier and sand hexes.

16.5 Recon Posture

A player assigned the Posture of “Recon”
a) has a hand size of 5;

17. NIGHT

Some scenarios are designated as taking place at night. If so, the following seven rules are considered to be in effect for the entirety of that scenario:

17.1 Night Command & Control

Each side has its Discard Limit changed to "one or all". What this means is that, if the player announces no Orders on his turn, he must discard one or every card in his hand.
Plans for a night attack were generally less flexible than that of their daytime counterparts due to the necessity for some rigidity of predetermined objectives, fire lanes and avenues of attack. During hours of darkness altering orders was difficult at best once battle was joined.

17.2 Night Movement

Each Terrain Type (that is, terrain above the dotted line on the Terrain Chart) has its Move Cost increased by 1.
Terrain Features – roads, trails and hills, for example – are not affected.

17.3 Night Visibility

There exists an automatic Hindrance of X, where X is the range from the sighting unit's hex to the targeted unit's hex (so always a minimum of 1). As usual, this night Hindrance is not cumulative with other Hindrances (such as for smoke or Orchard).
And note that the presence of a starshell within 2 hexes of the target hex negates this Hindrance in its entirety.

17.4 Fire For Effect with Smoke Round at Night

You can’t use Fire For Effect with Smoke Round during an Artillery Request order.

17.5 Starshells at Night

Starshell marker places when you use Fire For Effect with Illumination Round during an Artillery Request order, or through the Hidden Trap action.

17.6 Aircraft at Night

Air Support orders have no effect (aircrafts are NA at night).

17.7 Stealth at Night

Stealth actions may be played.

ORDERS

O18. GENERAL RULES

O18.1 Activation Procedure

To perform – or "give" – an Order, the active player (only) must reveal a card from his hand and announce that he is performing the Order listed at the top. The card is then placed in the player's discard pile. Then, if that particular Order is one that "activates" something, he activates himself(the player) or friendly unit (as appropriate for the Order) that has not yet been activated that Turn to perform the Order. If a Leader is activated in this manner, it may in turn activate all, some or none of the friendly non-Leader units within its Command Radius to perform the same Order—none of which can have been previously activated that Turn.
IMPORTANT—No Order (exception: Rout) may be given without the play of a Fate card from the hand and with that Order's name listed across the top.

O18.2 Activation Limit

No unit may be activated more than once per turn (exception: Heroes).

O18.3 Identification & Effect

All pieces activated for an order must be identified before the order is carried out. Further, once an order is given, at least one of the pieces activated for that order must physically carry it out.
If a Move Order is given, at least one activated unit must physically cross a hexside into another hex—you couldn't give a Move Order for the sole purpose of playing an Assault Fire Action, for example.

O18.4 Order Sequencing

An announced order must be performed in its entirety before the next order is given or before the player announces the end of his turn. This includes any actions requiring that order to be in effect.
You can't activate two units to Move, move one, play a Fire order on your opponent to get a broken enemy unit out of the way, then come back and move the other unit.

O18.5 Actions and Reflexes During Orders

During an order, any number of actions and reflexes may be announced by both players so long as their prerequisites are met.
If you activated a Leader and a Squad to Move, the Squad could move first and play one or more Smoke Grenade Actions before the Leader begins moving.

O18.6 Orders Not Confusing

If the active player's confusion level is 0, he directly chooses the Order to be performed.

O18.7 Orders Confusing

If the active player's confusion level is 1 or higher, the inactive player chooses an Order to be performed at random.
The active player must perform the Order selected by the inactive player.
a) If the active player has 0 cards in his hand, the inactive player cannot choose a card, then the active player must perform the Rout Order.
b) If the card chosen by the inactive player is an Order that the active player cannot activate himself or any piece; or
c) If the inactive player selects Command Confusion Order, the selected card returns to the active player's hand and then the active player must perform the Rout Order.

When the Order performed through the above process is finished, the active player's confusion level decreases by 1.
Whenever you attempt to perform an Order during your turn, if your confusion level is 0, you choose which Order to perform, and if your confusion level is 1 or higher, your opponent randomly chooses an Order to perform. Also, if your confusion level is 1 or higher, you cannot arbitrarily end your turn unless you reach the Order Limit.

O19. PASS (DISCARD)

If a player chooses to give no orders during his turn, proceed in the following order:
a) adjust his confusion level to 0.
b) In a Day scenario, he may elect to discard any number of cards (even zero) up to his assigned Discard Limit. In a Night Scenario, he must discard either one card or all cards.

O20. ADVANCE

O20.1 Procedure

A unit that is activated to Advance can enter one of the six hexes adjacent to the one it currently occupies, where it must stop. This can be done even if the hex is enemy-occupied.
This is the best way in which to enter into Melee with opposing units.
MPs and terrain Move Costs are ignored during an Advance. In addition, the inactive player cannot use Op Fire against advancing units.
You only get to go one hex but you are immune to Fire Attacks as you do so.

O20.2 Abilities

An advancing unit may:
- enter an enemy-occupied hex;
- exit off the enemy board edge;

O20.3 Restrictions

An advancing unit may not:
- enter an impassable hex;
- enter or exit a Bridge hex across anything other than its Road/Rail hexsides;
- exit off the left, right or friendly board edge.

O20.4 Melee

At the end of any Order or die trigger that causes a hex to contain units belonging to both sides, a Melee ensues in that hex. If more than one hex contains a Melee, the active player selects the order in which they will be resolved, one at a time.

O20.4.1 Melee Strength

After both players have played and resolved any Ambush Actions, each adds up the current FP of each of his remaining units – not Weapons – in the Melee hex, then adds +1 for each of those units with a boxed FP to arrive at his "Melee FP".
If, due to Ambush Actions, one or both sides have no units remaining in the hex, the Melee ends with no further effect.

O20.4.2 Fix Bayonets!

Before both players make a Melee roll, each player may discard a random card from their hand (the inactive player first). If the player performing this Reflex discards a card with Bayonet Reflex Icons, it adds +3 to his Melee roll; otherwise, it adds +1 to his Melee roll. This can only be done

once per Melee.
This rule represents the too numerous ways in which close-in fighting can become ever more deadly. Mechanically, this rule can also help a hand clogged with junk be of some use when opposing forces are engaged at very close proximity. Watch out, however, because if you have any truly useful cards in your hand they can be stripped away when using this option.
CC:K has replaced the Bayonet Action used in the existing CC with Fix Bayonets!.
In CC:K, the Bayonet Action was removed, but Fix Bayonets!, which felt very similar, was added. Fix Bayonets! is a type of Reflex(see R51).

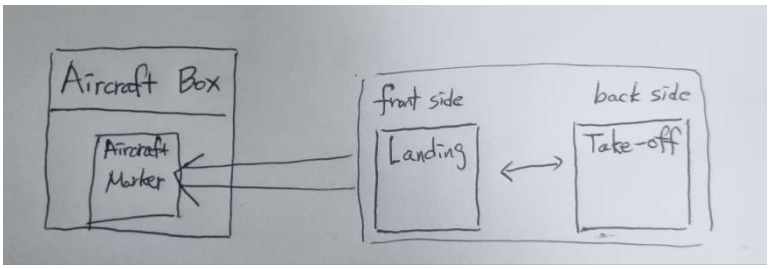

O20.4.3 Melee Roll
The inactive player makes a die roll and adds it to his Melee FP to arrive at his "Melee Total". Then the active player makes a die roll and adds it to his Melee FP to arrive at his Melee Total.
The rolls – while ostensibly simultaneous – are staggered in order to facilitate die triggers and possible use of the Initiative card after first roll. Also note that both player's Melee FPs are locked in just prior to the Inactive Player's Melee Roll, even if a trigger during that roll alters the composition of one or both sides.
If, due to a trigger during a Melee Roll, one or both sides have no units remaining in the hex, the Melee ends with no further effect.

O20.4.4 Melee Result
The side with the lower Melee Total has all of its participating units eliminated. In case of a tie, both sides are eliminated unless one player began the Melee in a Bunker or Pillbox, in which case only the other side is eliminated.

O21. AIR SUPPORT

O21.1 Activation

When an Air Support Order is announced, that player selects himself to be “activated” provided he has not been activated for an Air Support, or Regroup Order previously in the same Turn.
Air Support Order cannot be used at Night. Additionally, it can only be played if there is an aircraft(status) marker in the Aircraft Box.

O21.2 Abilities

If the landing side of an aircraft(status) marker inside the aircraft box is facing upwards, an activated player may:
- take off the aircraft(Flip over to its Take-off side).

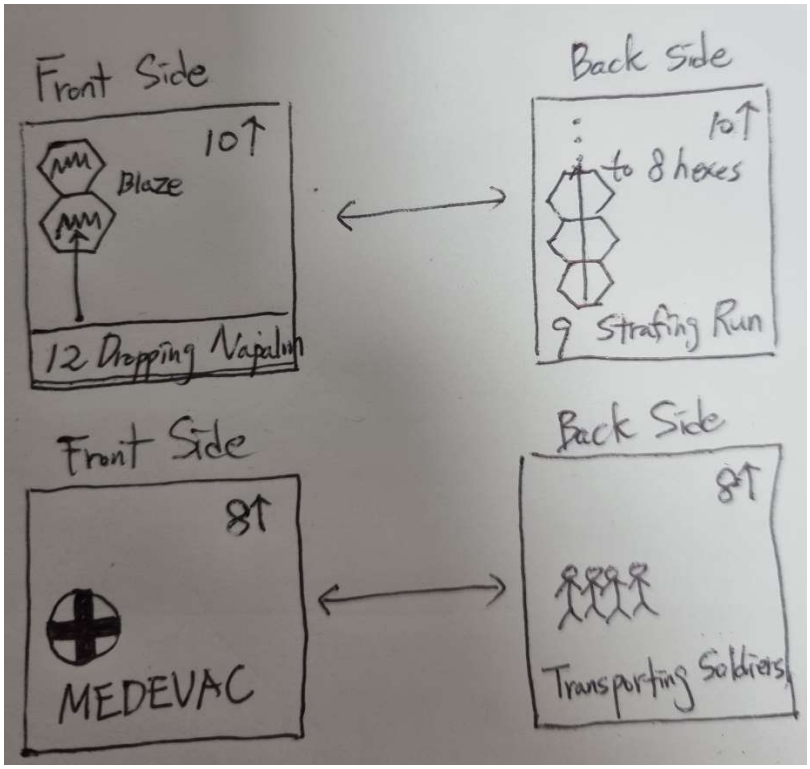

If the Take-off side of the aircraft(status) marker inside the aircraft box is facing upwards, an activated player may perform:
- Aerial Reconnaissance.
- Striking Further Afield.
- Strafing Run.
- Dropping Napalm.
- Aerial Medical Evacuation(MEDEVAC).
- Transporting Soldiers.

O21.3 Aerial Reconnaissance

If Aerial Reconnaissance is chosen for a player’s Air Support, he performs the following steps in the order shown:
a) Look at the opponent’s hand.
b) Land the aircraft(Flip over to its Landing side).

O21.4 Striking Further Afield

If Striking Further Afield is chosen for a player’s Air Support, he performs the following steps in the order shown:
a) Flip the opponent's radio, which is on the front side, to the back side so that it is in Artillery Delayed state.
b) Land the aircraft(Flip over to its Landing side).

O21.5 Strafing Run

If Strafing Run is chosen for a player's Air Support, he performs the following steps in the order shown:

a) Determine a random hex, noting both its letter and number.
b) Select any hex in the same column as that letter OR any hex in the same row as that number.
c) Place the Fighter(Strafing Run side) into the chosen hex.
d) Position it in its hex so that it clearly faces one of the six compass directions (i.e., the nose of the Fighter is aligned along a hexside).
e) The opponent can play an (Anti-Aircraft) Fire Action in response.
f) If the Fighter does not Abort Run, make 9 FP Fire Attack vs each hex(up to 8 hexes) in a line directly in front of the Fighter – in order closest to farthest – if it has a LOS to any unit in that hex (friendly or enemy). LOS is checked as if the Fighter occupied a level 5 hill.
g) Remove the Fighter from the map (placing it in the countermix).
h) Land the aircraft(Flip over to its Landing side).

O21.6 Dropping Napalm

If Dropping Napalm is chosen for a player's Air Support, he performs the following steps in the order shown:

a) Determine a random hex, noting both its letter and number.
b) Select any hex in the same column as that letter OR any hex in the same row as that number.
c) Place the Fighter(Dropping Napalm side) into the hex.
d) Position it in its hex so that it clearly faces one of the six compass directions (i.e., the nose of the Fighter is aligned along a hexside).
e) The opponent can play an (Anti-Aircraft) Fire Action in response.
f) If the Fighter does not Abort Run, choose any two adjacent hexes in a straight line facing the Fighter. These two hexes may contain friendly units, enemy units, or even neither. This hex cannot be its own hex. LOS is checked as if the Fighter occupied a level 5 hill. If there are no such hexes within LOS, skip directly to step k). Now the Fighter becomes Spotter.
g) Make a Targeting roll only for one hex closer to the hex where the Fighter is placed. If the Targeting roll is a miss, skip directly to step k).

h) The Fighter makes a 12 FP Fire Attack for each hex.
i) This Napalm attack automatically sets its targets' Cover to "0", with no modifications possible.
j) After the attack, If that hex is not water terrain and does not already contain a blaze, place a blaze marker into it. Remove any smoke or fortification marker from the hex. Any units in the hex must be removed by their owners and placed into any adjacent hex(es) not containing another blaze (inactive player first). They are eliminated otherwise.
k) Remove the Fighter from the map (placing it in the countermix).
l) Land the aircraft(Flip over to its Landing side).

O21.7 Aerial Medical Evacuation(MEDEVAC)

If Aerial Medical Evacuation is chosen for a player's Air Support, he performs the following steps in the order shown:
a) Place the Helicopter(MEDEVAC side) in a friendly hex that has no more than 1 Cover value and has at least one broken friendly unit.
b) The opponent can play an (Anti-Aircraft) Fire Action in response.
c) If the Helicopter does not Abort Run, remove a broken friendly unit from that hex.
d) The removed unit is then placed on any space of the Time Track the owning player wishes. It is always placed on the Time Track unbroken. It retains possession of any weapon it was carrying – again becoming unbroken if it was broken when removed – but do lose any Veteran, Berserk or Suppressed marker that may have been attached.
e) Remove the Helicopter from the map (placing it in the countermix).
f) Land the aircraft(Flip over to its Landing side).
If the Time Marker moves to position 12 on the Time Track while performing Aerial Medical Evacuation, leaving no space to place the removed unit, place the unit in the countermix.

O21.8 Transporting Soldiers

If Transporting Soldiers is chosen for a player's Air Support, he performs the following steps in the order shown:
a) Place the Helicopter(Transporting Soldiers side) in a friendly hex that has no more than 1 Cover value. Stacking limits must be observed.
b) The opponent can play an (Anti-Aircraft) Fire Action in response.
c) If the Helicopter does not Abort Run, remove a friendly unit on any space of the Time Track.
d) The removed unit is then placed on that hex. It retains possession of any weapon It was carrying.
e) Remove the Helicopter from the map (placing it in the countermix).
f) Land the aircraft(Flip over to its Landing side).
If the Time Marker advances during Transporting Soldiers and the unit being transported is placed on the friendly map edge, Transporting Soldiers will be canceled and have no further effect.
Helicopters were not used in World War II due to many technical shortcomings, but they were first used in combat when the Korean War broke out.

O22. ARTILLERY REQUEST

When an Artillery Request Order is given, that player must choose to perform one of the following activities:
a) Ammo Change; or
b) Fire For Effect; or
c) Request Additional Ammo
Artillery Request Order can only be played when the radio is not artillery delayed, and must not have the Artillery Denied marker.
Ammo Change and Fire For Effect may only be chosen if he has at least one ammo.

In CC:K, all activities of the Artillery Request order are possible at night, but please be aware that there is a higher chance that your allies will be attacked.

O22.1 Ammo Change

If Ammo Change is chosen for a player's Artillery Request, he activates one of his unbroken, unsuppressed leaders (only). He then performs the following steps in the order shown:
a) Move his radio marker to another round space. Radio can only move to the Smoke Round space when playing the Day Scenario. Radio can only move to the Illumination Round space when playing the Night Scenario.;
b) Flip it to the artillery delayed side.
If your Ammo Marker is already on space 0, you cannot play an Artillery Request to use Ammo Change.

O22.2 Fire For Effect

This option represents a leader calling for an actual artillery strike. A radio operator might be considered to be spending the time in between Artillery Request orders requesting, observing and correcting spotting rounds.
If Fire For Effect is chosen for a player's Artillery Request, he activates one of his unbroken, unsuppressed leaders (only). This leader will act as the "spotter" for the ensuing artillery's bombardment.
Since the radio itself is not activated, the active player could – if he had another Artillery Request in hand and another unactivated leader in play – use it for his next order and choose Fire For Effect yet again.
The active player performs the following four steps, in the order shown:
a) Deducting 1 ammo.
b) Spotting
c) Accuracy
d) Impact
Each step is explained in detail below.

O22.3.1 Deducting 1 ammo.

Move your Ammo Marker on the Track Display one space towards 0. If your Ammo Marker is already on space 0, you cannot play an Artillery Request to use Fire For Effect.

O22.3.2 Spotting

First, place the spotting round (SR) into a hex within LOS of the spotter: this will indicate the hex that is to be the intended center the artillery bombardment. This hex can be an otherwise impassable hex (such as a Blaze or Water Barrier).

O22.3.3 Accuracy

Once the SR has been placed, make a normal Targeting Roll using the range between the Spotter and the SR's current hex. This roll is modified by any Hindrances along the way, as usual.

O22.3.3.1 Hit – If the Targeting Roll secures a "hit', the Artillery is accurate. Reveal the top card of the Fate deck and ignore everything but the two dice (this is NOT a roll, so no die triggers). Using the hex-compass on the map, each die will give the direction in which the SR will err: the SR moves one hex in the white die's direction, then it moves one hex in the colored die's direction.
Yes, this could bring the SR right back into the same hex – good shot!

O22.3.3.2 Miss – If the Targeting Roll was a 'miss', the Artillery is inaccurate. Reveal the top card of the Fate deck and ignore everything but the two dice (this is NOT a roll, so no die triggers). Using the hex-compass on the map, the first (white) die gives the direction in which the SR will err. The second (colored) die is the distance in hexes the SR will travel in that direction.
Yes, this could bring the SR right back on top of your own troops – bad shot!

O22.3.3.3 Off-Map – Any SR that errs off the map – even if just briefly – is removed with no further effect and the Order ends. A SR can occupy an otherwise impassable hex (such as a Blaze or Water Barrier).

O22.3.4 Impact
The effect applied depends on which Round space his radio is currently in (see below).

O22.3.4.1 Smoke Round Barrage – he simply places seven random Smoke markers on the map – one into the hex occupied by the SR and one in each adjacent hex. Remove the SR from the map.

O22.3.4.2 HE Round Barrage – The hex into which the SR finally lands becomes the center hex of the activated Radio's artillery impact area; in other words, the SR's hex and each adjacent hex will be affected. The active player determines the order in which these seven hexes are attacked, though each may only have a maximum of one such Impact Roll made against it.
Each hex within the impact area that contains at least one unit or Fortification must have a separate Artillery Impact Roll made against it.
Hexes within the blast area but void of units/Fortifications are not attacked.
An Artillery Impact Roll follows the same rules and restrictions as for a Fire Attack Roll. Remove the SR from the map.

O22.3.4.3 Illumination Round Barrage – If the SR is occupying an impassable hex (such as a Blaze or Water Barrier), remove the SR from the map and there is no further effect. Otherwise, place the Starshell marker in the hex containing the SR. Remove the SR from the map.

O22.3.4.4 vs Fortifications – The Artillery box on the Track Display lists a "Fortification Vulnerability" number for each Radio FP. If an Artillery Impact Roll is exactly equal to the Fortification Vulnerability number associated with that Radio's FP, then any Fortification in the targeted hex is destroyed before any units therein make their Fire Defense Rolls.
Also note that most Fortifications (Foxholes, for instance) have a +1 modifier to their Cover when targeted by artillery.

O22.4 Request Additional Ammo
If Request Additional Ammo is chosen for a player's Artillery Request, he activates one of his unbroken, unsuppressed leaders (only). Lose 1VP. Add 1 ammo. Move your Ammo Marker on the Track Display one space away from 0.
There was a lot of shelling during the Korean War. The reason you pay VP to add shells is to bring shells intended for other fronts to the current front.

O23. COMMAND CONFUSION
This card cannot be played for an order.
It acts as a "dud" order in your hand – hope that you have a decent action on this card.

O24. FIRE

O24.1.1 Suspected Targets

When a Fire order is announced, at least one of the units to be activated (or its weapon) must have an enemy unit within both its LOS and range.

You can activate Leader A to fire, who then activates Squad B. This is legal if Squad B is the only one of the two with both LOS and Range to an enemy unit. You could also activate a 2-Range Team to fire even if the nearest enemy unit is three or more hexes away if that Team was carrying a Weapon capable of firing at that enemy unit.

O24.1.2 Scouts & Mortar Activation

Alternately, a Scout can be activated to fire if it then activates one or more unbroken, unsuppressed friendly units possessing mortars. These units can be anywhere on the map but the Scout itself must have an enemy unit within its LOS that is also within the range of an activated mortar. This Scout will act as the "spotter" for the ensuing mortars' bombardment.

O24.2 Ordnance & Targeting

Any piece with a broad white band behind its stats is termed "ordnance". Ordnance must first secure a hit against the targeted hex before making a Fire Attack roll.

Non-Ordnance pieces need not perform a Targeting roll and proceed directly to the next step when firing.

Generally, the range between the firing ordnance and the target hex is determined, then a Targeting roll is made to see if the piece hits and, if so, a Fire Attack roll is then made using that weapon's FP.

And remember that ordnance's stats and never modified by a friendly leader's command number.

At this time, the unit possessing the firing ordnance will act as the "spotter" for the ensuing the ordnance's fire(Exception : O24.1.2 Scouts & Mortar Activation).

O24.2.1 Smoke Rounds

Some weapons are able to place a smoke marker in the targeted hex (as indicated by the word "Smoke" to the right of the weapon's illustration) instead of making a normal Fire Attack roll. Ordnance is allowed to target any hex within its range – even one containing no enemy units – if it will place smoke this way. The active player must declare this decision aloud when he selects the target hex, prior to making the Targeting roll.

O24.2.2 Targeting Range

Determine the range by counting the number of hexes from the firing piece to its target hex – including the target hex but excluding the firing piece's hex. If this range is greater than the printed range on the firing piece, the shot cannot even be attempted.

Note that mortars also have a minimum range at which they can fire. For example, the US Light Mortar has a range of "2-16" so it can't fire at an adjacent hex.

O24.2.3 Targeting Roll

Once the range is determined, the active player must make a die roll – but multiplying the two dice together rather than adding them together as with other rolls – that is greater than the range in order to hit the targeted hex. Any other result is a miss and the attack is cancelled with no further effect.

So a Targeting roll of 1·6 (total of 6) misses at range 6 or more, and will hit if the range is 5 or less. A Targeting roll of 6·6 is 36 and will hit anything.

O24.2.4 Targeting & Hindrances
Targeting rolls are always modified by any relevant Hindrance along the way.
Ordnance firing at a target 5 hexes away with one or more grass hexes in between (Hindrance of 3) would need to physically roll "9" or more to hit instead of "6+".

O24.2.5 Scouts & Mortar Spotting
When a mortar fires, the owning player may choose to have the LOS to the targeted hex be traced from a friendly Scout that activated it instead of from the mortar itself. The Targeting roll must still count the actual range from the mortar to the targeted hex but any Hindrance modifying the roll will be based upon the LOS from the activated Scout.

O24.3 Fire Attack
General rules for fire orders include:
a) Each piece activated to fire may take one shot at any hex within both its range and LOS, either alone or as part of a Fire Group.
b) Unless firing smoke, there must be at least one in-LOS enemy unit in a targeted hex for the shot to occur.
c) Units (friendly or enemy) in intervening hexes are not affected by any Fire Attack that passes through their hex.
Generally, a unit's FP – modified both by command and by possible Hindrances between itself and the target – is added to a "Fire Attack" roll to arrive at an "Attack Total". Then each unit in the targeted hex adds its morale – modified by command and Cover – to a "Fire Defense" roll to arrive at a "Defense Total". If the firer's Attack Total is at least double a targeted unit's Defense Total, that unit is eliminated. If the firer's Attack Total beats a targeted unit's Defense Total, that unit breaks. If the Totals are tied, a Moving target breaks while a non-Moving target becomes suppressed. Any other result will have no effect.
This is how CC:K makes moving a bit more dangerous than remaining stationary. If the active player's units are being shot at via Op Fire, they will break on a tied result rather than just becoming suppressed.

O24.3.1 Fire Groups
Two or more activated units/weapons – "pieces" – may fire together by combining into a "Fire Group". Every piece in a Fire Group must have both an unobstructed LOS to an enemy unit in the target hex and be within range of that hex for the Fire Attack roll to be made. Units forming a Fire Group can occupy more than one hex but each such hex must be contiguous (so that it forms a "chain" of adjacent firing units).
Fire Groups are never mandatory – pieces that could form a Fire Group may choose to fire separately or to form smaller Fire Groups, at the owning player's discretion. A unit and its weapon may even fire separately and at the same or different hexes.

O24.3.1.1 Ordnance
Weapons with a white band must always fire alone and thus can never be assigned as part of a Fire Group.

O24.3.1.2 Group FP
The total FP of a Fire Group is X+Y, where X is the FP of one firing piece and Y is the number of other firing pieces.
Example: A 2-command leader activates a team possessing a mortar stacked in the same hex as well as a squad possessing an 8-FP MG in an adjacent hex. The MG, squad and team can form a Fire Group targeting an enemy two hexes away with a total of 10 FP (X=8 for the MG; Y=2 for the squad + team). The mortar, being ordnance, must fire separately.

O24.3.2 Attack Hindrances

If the LOS from any non-ordnance firing piece to the target hex is hindered that shot's FP is reduced by the largest such Hindrance. If this would modify the attack's FP to zero or less, the shot cannot be attempted.

Keep in mind that actions such as Crossfire or Marksmanship can increase a Fire Attack's strength to greater than 0, thus allowing a hindered shot to occur.

O24.3.3 Grenades!

Before the player makes a Fire Attack roll, and at least one piece is firing at an adjacent hex, he may discard a random card from his hand. If he discards a card with Hand Grenades Reflex Icons, it adds +3 to his fire attacking roll; otherwise, it adds +1 to his fire attacking roll. This can only be done once per fire attack.

This rule represents the too numerous ways in which close-in fighting can become ever more deadly. Mechanically, this rule can also help a hand clogged with junk be of some use when opposing forces are engaged at very close proximity. Watch out, however, because if you have any truly useful cards in your hand they can be stripped away when using this option.

CC:K has replaced the Hand Grenades Action used in the existing CC with Grenades!.

In CC:K, the Hand Grenades Action was removed, but Grenades!, which felt very similar, was added.

Grenades! is a type of Reflex(see R51).

O24.3.4 Fire Attack Roll

Once the final FP is determined, the firing player makes a roll and adds the sum of the two dice to the final FP to arrive at an Attack Total.

O24.3.5 Fire Defense Roll

A player has to make a Fire Defense roll – one at a time in any order desired – for each of his units that were in a hex at the moment that a Fire Attack roll was made against it. All Fire Defense rolls for one attack must be made before the next attack is announced, even if that same hex will be shot at again.

Since a broken leader usually lowers command, you generally want to roll Defense for a leader last (in case it breaks) in order for the other units in the hex to gain the morale boost from his command.

A targeted unit's morale – modified by both Cover and command – is added to a roll in order to arrive at a Defense Total:

a) If the Defense Total is half(or less) the Attack Total, the unit is eliminated.

b) If the Defense Total is less than the Attack Total – but still more than half – the unit breaks.

c) If the Defense Total is equal to the Attack Total, the unit becomes suppressed unless it is currently activated to Move – in which case it breaks instead.

d) If the Defense Total is equal to the Attack Total, the unit is unaffected if is currently not moving and it has a Berserk marker. Berserk Units are immune to receiving the Suppressed marker.

e) If the Defense Total is greater than the Attack Total, the unit is unaffected.

A large US fire group fires at a hex containing three enemy teams (7 morale each) and one enemy leader (9 morale). The US Attack Total is 19.

The first team makes its Defense Roll: 2-snake eye! The resulting Defense Total of only 9 is less than half the Attack Total so this first team is outright eliminated-whether already broken or not (a above).

The second team rolls a 7 for a total of 14 and breaks (b above).

The third team rolls 12, tying the Attack Total and thus only becoming suppressed (c above).

Finally, the leader makes a nice high Defense Roll of 11 for a total of 20: enough to remain

unhurt.

O25. HARASS

When a Harass order is announced, at least one of the units to be activated (or its MG) must have an enemy unit within both its LOS and range. Also, the opponent must have at least one card in his Hand. Activated pieces perform only one Harass. In other words, only one Harass can be performed per Harass Order.

O25.1 Harass Groups

Two or more activated units/MGs – "pieces" – must harass together by combining into a "Harass Group". Every piece in a Harass Group must have both an unobstructed LOS to an enemy unit in the target hex and be within range of that hex. Units forming a Harass Group can occupy more than one hex but each such hex must be contiguous (so that it forms a "chain" of adjacent harassing units).

a) Announce at least one Order name, up to the number of activated units and pieces (Fire, Move, and Advance…).
It is meaningless for the number of activated units or weapons to be greater than the number of order types.
'Regroup-#' Regarding the Order, players only need to announce "Regroup" and do not need to mention the number.
b) If any unit or piece with a boxed range is activated, select two fate cards at random from your opponent's Hand to check, otherwise select just one.
c) If there is one card among the cards you have selected that matches the order you announced, discard that card and return the remaining cards to the opponent's hand. If the two cards you select are exactly the same as the order you announced, discard only one of them and return the remaining cards to the opponent's hand.
d) If you discard a card from your opponent's hand, the enemy unit becomes suppressed.
Harass refers to a low-cost tactic used when the goal is not a decisive attack, but merely to keep the enemy on edge and conserve ammunition. It is also intended to paralyze the opponent's ability to respond through psychological warfare, and specifically during night combat, it refers Harassing Fire – indiscriminately firing at likely enemy locations where accurate aiming is difficult.

O26. MOVE

Units that are activated to Move can move from hex to hex across the map, expending MPs in each new hex that they enter. A unit has as many MPs to spend during a Move Order as its current Movement number, which can be modified by Command or by having entered a Road hex, among other things.

O26.1 Movement Costs

Each terrain lists a "Move Cost". In order to enter an adjacent hex during a Move Order, an activated unit must spend a number of MPs equal to the Move Cost of the terrain in that hex. Additional costs may be assessed if the unit crosses certain hexsides (a Wall, for example) or moves to a higher elevation.
IMPORTANT: A unit may not enter a hex unless it has at least as many MPs remaining as the total cost to enter that hex.
Units without enough MPs to move even one hex – perhaps they are broken or carrying a heavy Weapon – will have to wait for an Advance Order (or Rout!) to get going.

O26.1.1 Weapon Transfer–At any point during a Move Order, an activated unit may transfer

its Weapon to a friendly unit stacked with it by expending one of its available MPs. The receiving unit need not be activated to Move, but cannot already possess a Weapon.

O26.2 Moving Together

The movement of one unit must be completed in its entirety before another activated unit can begin moving. The one exception is that activated units that begin a Move Order in the same hex may be moved tighter provided those units remain together throughout the entirety of that Move Order.

Those units will therefore always end their movement in the same hex, and the unit with the smallest modified Movement number will determine how far the group as a whole can travel. If one of these units breaks along the way, it will usually stop the entire group dead in its tracks.

O26.3 Opportunity Fire & Movement

The inactive player may use Op Fire against the active player's moving units each time they enter a new hex.

O26.4 Movement Restrictions

A moving unit may never:
- enter an enemy-occupied hex;
- enter an impassable hex;
- enter or exit a Bridge hex across anything other than its Road/Rail hexsides;
- exit off the left, right or friendly map edge.

Exiting a unit off the enemy board edge, however, will gain you victory points.

O26.5 Movement Etiquette

Each time the active player moves a unit or group of units into a new hex, he should clearly announce the cumulative MP expenditure up to that point, then pause for a second or two. This allows the inactive player a short time in which to decide whether to announce an Op fire into that hex (or, if the Defender, to play a Mines or wire Action).

Furthermore, it should be incumbent upon the inactive player to pay attention and say "Stop!" whenever he may have an Action to play or Fire Attack to make in response to the active player's movement.

Moving players may want to get in the habit of asking "Actions?" after each hex entered; or maybe just pausing to make brief eye contact with the opponent.

O26.6 Timing & Movement

After each MP expenditure, the inactive player must play all Actions that he wishes before the active player may play his first one.

So if the moving player wanted to play a "Smoke Grenades" or "Assault Fire" Action after entering a new hex, the inactive player would always be allowed to play a "Mines" or "Wire" Action first, and/or get to perform an Op Fire into that hex.

O27. REGROUP

When a Regroup Order is announced, that player selects himself to be "activated" provided he has at least one broken and/or Suppressed unit in play and he has not been activated for an Air Support, or Regroup Order previously in the same Turn.

IMPORTANT-The broken/Suppressed units themselves are not activated during a Regroup Order: only the player himself is.

Thus no more than one Regroup could be played per Turn, as the player will have already been activated. Also, a unit affected by a Regroup Order could be activated for that player's next Order, or vice versa.

Each Regroup Order is accompanied by a number 3 through 5: this is the number of "Regroup Points" the active player receives for the order. Regroup Points are spent to remove suppressed markers and make a Rally Roll for broken units. Specifically, each Regroup Point spent does one of the following:
a) removes a suppressed marker from any friendly unit
–or–
b) makes a Rally Roll for one friendly broken unit.
If applicable, the same unit can be chosen for both options or multiple times for one option.
So a "Regroup-3" order could do the following: remove three suppressed markers; or make a Rally Roll for three units; or remove one suppressed marker and make a Rally Roll for two units.
Example: The active player performs a Regroup-5 order. He receives 5 Regroup Points. He chooses a friendly unit that is suppressed and broken, and first spends 1 Point to remove the suppressed marker from it. He then uses 1 Point to Rally Roll for that unit. The Suppressed marker is put back on it, because the roll and its current Morale are equal. He then uses 1 Point to remove the suppressed marker from it, and uses 1 Point to Rally Roll for that unit. This roll is successful. He has 1 Point left, but there are no more suppressed or broken friendly units, so he ends the order.
Regroup Points not spent during the current Regroup order are forfeit: Regroup Points cannot be carried over to future Regroup orders.

O27.1 Rally Roll
A Rally Roll can have one of three effects on a broken unit:
– if the roll is less than its Morale, Rally it.
– if the roll is equal to its current Morale, it becomes Suppressed and remains broken;
– if the roll is greater than its current Morale, there is no effect and the unit simply remains broken.
So for a broken unit with a current Moral of 7 – having already taken into account any Command and/or Cover modifiers – a Rally Roll of 5 would cause it to Rally; a Rally Roll of 7 would simply Suppress it; and a Rally Roll of 9 would have no effect.
You usually want to roll for your broken Leaders first–if they Rally, their increased Command will make Rallying more likely for other broken units in the same hex.

O28. ROUT
There is no fate card with ROUT order written on it.
A Rout occurs only when the active player's confusion level is 1 or higher and attempts to perform an Order, the active player has 0 cards in hand, or the active player cannot perform an Order that was randomly selected from his hand.

O28.1 Activation
Rout Order does not activate anything.

O28.2 Rout Roll
The active player – that is, the one that announced the Order – makes a roll for each of his unit that was broken at the time the Order was announced.
Units that become broken due to Events during a Rout Order can't have a Rout Roll made for them.
If the chosen player has more than one broken unit, the active player chooses the order in which those units will be affected. A Rout Roll can have one of three effects on a broken unit:
– if the roll is less than its Morale, there is no effect and the unit remains where it is.
– if the roll is equal to its current Morale, it becomes Suppressed if not already.

– if the roll is greater than its current Morale, it must “Retreat” a number of hexes equal to the difference.
So for a broken unit with a current Morale of 7 – having already taken into account any Command and/or Cover modifiers – a Rout Roll of 9 means a Retreat of two hexes; a Rout Roll of 7 would simply Suppress it; and a Rout Roll of 5 would have no effect.

O28.3 Retreating
When a Rout Roll is greater than the broken unit’s Morale, it must Retreat a number of hexes equal to the difference. A player always Retreats his own units. Each hex Retreated into must be closer to the controlling player’s board edge than the one it just left (in other words, there must be fewer intervening hexes between the unit and its friendly board edge in the hex it Retreats into than there are for the hex it Retreats out of). If already adjacent to its friendly board edge, the unit is eliminated (effectively retreating off the map).

O28.3.1 Terrain – MPs are not counted during a Retreat, so all terrain Move Costs are ignored.
O28.3.2 Opportunity Fire – Op Fire is not permitted against Retreating units.
O28.3.3 Wire – A Retreat is allowed into and out of Wire without having to stop.
O28.3.4 Mines – Mines attack Retreating units normally, both when they enter and/or leave a hex containing a Mines marker.
O28.3.5 Elimination – A Retreating unit is immediately eliminated if it is forced to Retreat:
– Off its owner’s friendly board edge;
– Into an enemy-occupied hex (it surrenders to them);
– Into an impassable hex;

O29. SITREP(Situation Report)
When a SITREP Order is announced, the active player activates one of his unbroken, unsuppressed leaders (only) provided that leader has a LOS to at least one enemy unit.
The active player draws fate cards equal to the active leader's command + 1. Then, he chooses and discards fate cards equal to the leader's command from his hand.

The development of walkie talkie gives Combat Commander more advantages!

ACTIONS

A30. GENERAL RULES

A30.1 – Actions may be announced by either player at any time via a Fate card played from the hand so long as that Action's listed condition or prerequisite is met. Multiple Actions may be conducted in response to the same game situation. All effects of consecutively played Actions are cumulative.

A30.2 Timing–If both players wish to perform one or more Actions (including Op Fire) at the same time, the inactive player must perform all of his Actions before the active player may play his first one.

A30.3 Activation–With the sole exception of Op Fire, and AA Fire, Actions that affect units do not activate those units like an Order would. Conversely, a unit that has already been activated by an Order/Op Fire Action can be the target of any number of (non-Op Fire) Actions.

Except for Anti-Aircraft Fire and Opportunity Fire, the following rules for individual Actions need not be read and memorized your first time through the rules: most Actions are self-explanatory on the cards themselves. So this section can be safely ignored until the need arises for a clarification during actual game play. Actions are listed in alphabetical order for ease of reference.

A31. AMBUSH

Ambush may only be played before dice are rolled during a Melee. The inactive player must play all the Ambushes he wishes for that Melee before the Active player may play his first one.

Effect–The opponent must select one of his units that is participating in the Melee and break it.

IMPORTANT–All Ambush effects are resolved before Melee FP is calculated.

Note that both players can announce Ambush Actions. Note also that it is possible for both sides to be entirely eliminated via Ambush before the Melee Rolls would otherwise have been made.

A32. ASSAULT FIRE

Assault Fire may only be played if at least one unit currently activated to Move (or its Weapon) has both:

– boxed FP, and

– an enemy unit within its current Range and LOS at which to shoot.

Effect–Each Assault Fire Action allows a single Fire Attack to be made. This attack may form a Fire Group using any or all moving units and/or their Weapons that have boxed FP. The attack otherwise adheres to all rules and restrictions pertaining to a regular Fire Attack as if made during a Fire Order.

Note that you may announce an Assault Fire Action before, during, or after any physical movement has been carried out–the firing pieces need only be activated to Move to utilize the Action.

A33. COMMAND CONFUSION

This card cannot be played for an action.

It acts as a "dud" action in your hand–hope that you have a decent order on this card.

A34. COMMANDING HEIGHTS

Commanding Heights may only be played if the spotter is at a higher elevation than the target hex, and before the targeting roll.

Effect– Multiply the targeting roll by 2.

A leader performing a Fire For Effect from an Artillery Request Order, a unit applying Fire to an enemy with an ordnance, a Fighter dropping napalm, or a Scout directing a target location to a unit with a Mortar can use the Commanding Heights Action.

A35. CONCEALMENT

Concealment may only be played just prior to the player making a Defense Roll.
Effect–Determine the Cover in the targeted hex and reduce the Fire Attack Total by that amount. All Cover modifiers – such as for Roads or a Mortar attacking units in Foxholes – are taken into consideration before reducing.
Yes, Concealment is used after the targeted player knows the attack total. Maybe the firer only thought he saw gun flashes between those trees…

A36. CROSSFIRE

Crossfire may only be played just prior to the player making a Fire Attack Roll, and only when firing at one or more moving units.
Effect–Increase the Fire Attack's FP by +2.

A37. DESTROY

Destroy may only be played when the opponent discards one or more cards due to "passing".
Involuntary discards due to an Action or an Event don't count.
Effect–Eliminate one Fortification or one Sighting marker in any hex containing a friendly unit with a boxed movement.
Sighting Markers will appear in future expansions to CC:K.

A38. DEPLOY

Deploy may only be played at the beginning of an order in which at least one squad was activated.
Effect– the active player selects one friendly squad on the map. the squad is removed from its hex, placed back in the countermix, and replaced with two teams of the same quality – green, line or elite – as that side's OB (as indicated by his OB stats marker on the OB Display). These teams enter play broken if the squad was broken. If there was a weapon, suppressed, berserk or veteran marker on the squad, only one of the two teams retains the marker (in the case of multiple markers, they can be split between the two resulting teams). Finally, these teams are treated as being the same unit from which they were created—so if the squad had been activated previously that turn, the teams are considered to have been activated as well; and any pending results against the squad (such as having to become suppressed, broken or eliminated) will immediately affect both teams equally.
Turning one squad into two teams gives you a bit more flexibility in movement, stacking, and garrisoning objectives—and can also increase your net FP when part of a larger Fire Group. The drawback is weaker individual stats and – because there are two where once there was one – they become harder to control without a friendly leader nearby.

A39. (ANTI-AIRCRAFT) FIRE

This action is generally available only to KPA that do not have an Air Support order.

A39.1 Prerequisite

A Fire action may only be played during an opponent's Air Support order, and only just after one of the Fighter, or Helicopter markers is placed in a hex on the map. This type of reactionary fire

is termed “AA Fire”.
Note that Fire actions are listed across the top of any Fate card that has one, in the same position as for a Fire order. As a reminder of its dual capability, the word “Fire” will, when appearing along the top of a Fate card, always be preceded by the words “Order/Action”.

A39.2 Procedure
Generally, when the active player performs an Air Support Order, performing one of the following activities: Strafing Run, Dropping Napalm, Aerial Medical Evacuation, or Transporting Soldiers, immediately after placing an aircraft(Fighter or Helicopter) counter on a hex on the map, the inactive player can perform AA fire by using the fire action.
Unlike Fire Order, When an AA fire Action is announced, that player selects himself to be "activated".
When he does AA fire, roll the dice once and if the added value is greater than or equal to the abort value of the aircraft(Fighter or Helicopter) counter, remove the aircraft(Fighter or Helicopter) counter and return it to the countermix, otherwise no effect.

A40. (OPPORTUNITY) FIRE

A40.1 Prerequisite
A Fire action may only be played during an opponent’s Move order, and only just after a moving unit enters a new hex. This type of reactionary fire is termed “Op Fire”.
Note that Fire actions are listed across the top of any Fate card that has one, in the same position as for a Fire order. As a reminder of its dual capability, the word “Fire” will, when appearing along the top of a Fate card, always be preceded by the words “Order/Action”.

A40.2 Procedure
Generally, when the active player is performing a Move order, he should count aloud his units’ accumulated MP expenditure in each hex as it is entered. Each time such an expenditure is made, the inactive player has the option to call out “Wait!” and temporarily halt movement. If he does, he may choose to do either or both of the following:
– play a Fire action from his hand and activate one or more units to fire at that hex (as if he were activating units for a Fire order) and/or
– make one Fire Attack against that hex with any of his units/weapons that were activated for Op Fire at any point during that same Move order.
After any such Fire Attack is made – or the opportunity to do so is declined (“Never mind; keep moving”) – the active player may continue with his Move order.

A40.3 Exceptions
Units (and their weapons) that are activated for Op Fire follow all normal rules for a Fire order, with three important exceptions:
a) Ordnance cannot conduct Op Fire (though a unit possessing an Ordnance weapon could itself fire normally).
b) They are not limited to only firing once, and so remain activated and eligible to fire at moving targets for the entirety of that Move order (only).
Note that units are activated for Op Fire, so they could not be activated for Op Fire again in that same turn if the active player announced another Move order.
c) No more than one Fire Attack may be made by the inactive player per MP expenditure by the active player.

A41. HIDDEN (NAME)

Important—The following four "Hidden" actions may only be played by the scenario Defender—never a player assigned the Posture of Attacker, Straggler, Invader or Recon.

A41.1 Hidden Entrenchments

Hidden Entrenchments may only be played just prior to the scenario Defender making a Defense Roll. The hex affected by the attack cannot be a Building or Water hex, nor already contain a Fortification of any type.

Effect—Place a Foxholes marker into that hex.

A41.2 Hidden Pillbox

Hidden Pillbox may only be played just prior to the scenario Defender making a Defense roll. The hex affected by the attack cannot be water terrain nor already contain a fortification of any type.

Effect—Place a pillbox marker into that hex.

A41.3 Hidden Trap

Hidden Trap may only be played by the scenario Defender just after one or more enemy units Move or Advance into a hex. That hex cannot be water terrain nor already contain a fortification of any type.

Effect—The scenario Defender chooses to do one of the following:

– place a mines marker into that hex then immediately make a Mine Attack against each of those moving/advancing units; or

Any unit that was already in the hex would be immune to this initial minefield attack.

– place a wire marker into that hex.

Note that this will end a unit's Move as a unit must spend all its MPs to exit wire and it had to have spent at least 1 MP to get in.

– If it's a night scenario, place a starshell marker into that hex.

The starshell here represents a light mine.

A41.4 Hidden Unit

Hidden Unit may only be played when the opponent discards one or more cards from his hand due to a "pass" action.

Effect—The scenario Defender performs the following steps in the order shown:

a) Make a roll on his nation's Support Table [on his faction's player aid card];

b) From the column matching the roll, select one unit – at no cost – that is available for that scenario's year;

c) Place the selected unit (along with its weapon, if any) into any hex that is: within his original setup area; and contains no units of either side; and has a Cover of at least 1.

A42. INTENSE BARRAGE

Intense Barrage may only be played when the active player places a spotting round on the map and only when the Radio is in the HE Round space.

Effect—Deduct one more ammo. Add +2 to radio's FP during the Fire For Effect.

A43. LIGHT WOUNDS

Light Wounds may only be played at the instant that a friendly squad – either broken or unbroken – would break.

Light Wounds can only be used on a squad that is breaking, not one that is being eliminated outright—like via the KIA event or as a result of having the lower Melee Total.

Effect—Lose 1 VP. Then, instead of that squad breaking (or being eliminated due to already being broken), place it back into the countermix. Take a team from the countermix – of the same quality as that player's OB: either green, line or elite – and place it into the hex from which the squad was taken.
The "quality" of the squad is irrelevant. Only the position of that side's OB stats marker on the OB Display determines which team will come into play.
If the squad was broken when removed, the replacement team comes into play broken. If there was a weapon, suppressed or veteran marker on the squad, the team retains the marker. Finally, the team is treated as being the same unit from which it was created—so its activation status for the turn matches that of the swapped squad.
When a berserked unit is about to break, the light wounds action cannot be used, as it will be eliminated instead.

A44. MARKSMANSHIP
Marksmanship may only be played just prior to the player making a Fire Attack roll. The attack must include a firing squad or team of the indicated faction.
Effect—Increase the Fire Attack's FP by +2.
Some Marksmanships have a specific year associated with them, and can only be used as Actions while playing a scenario from that year.

A45. NO QUARTER
No Quarter may only be played at the conclusion of a melee, and only if the player has at least one unit that survived the melee.
Effect—The player gains 2 VPs.

A46. SCORCHED EARTH TACTICS
Scorched Earth Tactics may only be played by the scenario Defender – never a player assigned the Posture of Attacker, Straggler, Invader or Recon – and only be played when the opponent discards one or more cards from his hand due to a "pass" action.
Effect–Place a blaze marker into a hex adjacent to one of friendly units.

A47. SMOKE GRENADES
Smoke Grenades may only be used by a unit with boxed Movement, and must be played while that unit is activated to Move.
Effect—Select one Smoke marker at random and place it in or adjacent to that unit's hex, provided that hex is not Water Terrain nor already contains a Blaze.
And remember that two or more Smoke markers won't stack together; so after placing Smoke into Smoke, only the marker with the largest Hindrance will remain.

A48. SPRAY FIRE
Spray Fire may only be played just prior to the player making a Fire Attack Roll. All firing pieces must have boxed Range. The two targeted hexes must each:
– be within Range of all firing pieces;
– be adjacent to one another;
– contain an enemy unit.
For determining possible Obstacles and Hindrances in intervening hexes, LOS must be checked from all firing pieces to both hexes.
Note that Spray Fire is not cumulative: It reads "2 hexes" not "an additional hex".
Effect— The Fire attack will affect both targeted hexes simultaneously. Only one Fire Attack Roll is made, though all units in both hexes must make Fire Defense Rolls based on that single Attack Total.

You may want to think of the two adjacent hexes as one big hex that just happens to have two LOS dots, possibly with different Cover affecting different defending units

A49. STEALTH

Stealth may only be played when the opponent discards one or more cards from his hand due to a "pass" action in the night scenario.
Effect— Select one of his units on the map that is not within the radius of a starshell. He removes that unit from the hex that it occupies and places it into an adjacent hex. A unit can't be placed in an impassable hex (such as a blaze).

A50. SUSTAINED FIRE

Sustained Fire may only be played just prior to the player making a Fire Attack roll, and only if at least one mortar or machine gun is firing.
Effect—Increase the Fire Attack's FP by +2 but, if the Fire Attack roll ends up "doubles", one firing mortar or machine gun must break (firing player's choice if more than one).
Be careful with this one—Sustained Fire's drawback is cumulative with other Sustained Fires which could cause a weapon to break then immediately break again, eliminating it outright.

REFLEX

R51. GENERAL RULES

R51.1 – Reflex may be announced by either player at any time by randomly discarding one fate card from their hand so long as that Reflex's prerequisite is met. This may be conducted only once per player whenever the prerequisite is met.

Reflex means "Tactical reflex," which usually means a fast, trained physical or mental response used in a tactical situation.

R51.2 Timing–If both players wish to perform one Reflex at the same time, the inactive player must perform his Reflex before the active player may play his one.

R51.3 Activation– Reflex affects units do not activate those units like an Order would.

R52. Fix Bayonets!

Before both players make a Melee roll, each player may discard a random card from their hand (the inactive player first). If the player performing this Reflex discards a card with Bayonet Reflex Icons, it adds +3 to his Melee roll; otherwise, it adds +1 to his Melee roll. This can only be done once per Melee.

R53. Grenades!

Before the player makes a Fire Attack roll, and at least one piece is firing at an adjacent hex, he may discard a random card from his hand. If he discards a card with Hand Grenades Reflex Icons, it adds +3 to his fire attacking roll; otherwise, it adds +1 to his fire attacking roll. This can only be done once per fire attack.

R54. Dig In!

In step h) of the Time Marker Advance Procedure, each player may discard a random card from their hand (the inactive player first). If the player performing this Reflex discards a card with Entrenching Tool Reflex Icons, he places a foxholes marker into a hex containing a friendly unit. The hex cannot be Water Terrain, Semi-Water Terrain, and can't already contain a Blaze or another Fortification of any type. Otherwise, nothing happens. This can only be done once per Time Marker Advance.

EVENTS

E55. GENERAL RULES

Events are never played from the hand: they only occur via certain rolls, whereupon normal game play pauses so that that player can reveal the top card of his Fate deck and read aloud and execute the listed event.

When resolving an event, there are three important guidelines:

a) Ignore any portion of an event that is impossible to fulfill given current game conditions while performing those parts that are possible, if any.

b) When an event lists more than one activity to perform, they are performed in the order stated within the event itself.

c) Die triggers are always ignored when they are attached to a die roll occurring during an event.

The following rules for individual events need not be read your first time through the rules. Most events are self explanatory on the Fate cards themselves, so this section can be safely ignored until the need arises for a clarification during actual game play.

E56. ADRENALINE

When this event occurs, the receiving player rallies one of his own non-veteran broken units, if any. If he does, he places a berserk marker on that unit if it doesn't already have one.

E57. ADVISOR

When this event occurs, the receiving player may select one card from his hand. If he does so, he may take one card from his discard pile, excluding the card he just discarded, and put it into his hand.

E58. AMMUNITION RESUPPLY

When this event occurs, the receiving player gains 1 Ammo.

E59. ARTILLERY DELAYED

When this event occurs, the receiving player flips one radio (enemy or friendly) to the Artillery Delayed side.

E60. BATTLE HARDEN

When this event occurs, the receiving player selects a friendly unit that does not have a veteran or berserk marker and places a veteran marker on it.

E61. BLAZE

When this event occurs, the receiving player must determine a random hex. If that hex is not water terrain and does not already contain a blaze, place a blaze marker into it. Remove any smoke or fortification marker from the hex. Any units in the hex must be removed by their owners and placed into any adjacent hex(es) not containing another blaze (inactive player first). They are eliminated otherwise.

E62. BLOOD CHIT

When this event occurs, the receiving player may select one friendly unit on the Casualty Track and places it on any space on the Time Track he wishes. That unit is placed on the Time Track unbroken.

E63. BREEZE

When this Event occurs, remove all Smoke markers from the map. Then place a random Blaze marker into each non-Water hex that is both adjacent to and "downwind" of an existing Blaze

marker. The downwind direction is stated in the Event as a number between 1 and 6, which corresponds to the hex compass on each map. Any units in a hex into which a Blaze spreads must be removed by their owners and placed into any adjacent hex not containing impassable terrain. They are eliminated otherwise.

E64. COMMISSAR

When this Event occurs, the receiving player must select one of his broken units and make a roll for it: If the roll is greater than its Morale, it is eliminated. If the roll is less than or equal to its Morale, it Rallies.

E65. DETRITUS OF WAR

When this event occurs, the receiving player must perform the following activities in the order shown: a) Smoke—Determine a random hex. If that hex is not water terrain and doesn't already contain a blaze marker, he selects a random smoke marker and places it there.
b) Wire—Determine a second random hex. If that hex is not water terrain and does not already contain a blaze or fortification, place a wire marker into it.
c) Mines—Determine a third random hex. If that hex is not water terrain and does not already contain a blaze or fortification, place a mines marker into it.
Reminder: units already in the hex will not be affected by the mines unless and until they Move or Advance out of it.

E66. DISPERSE

When this event occurs, the receiving player must remove one smoke and startshell marker from the map(placing smoke back in the draw cup or starshell back in the countermix).

E67. FIELD OF BATTLE

When this event occurs, the receiving player gains 1 VP if he controls more mapboard objectives than his opponent.

E68. FIELD PROMOTION

When this event occurs, if not already on the map, the receiving player may place his nation's "Private" (the one with "6" morale and "2" command) into a hex occupied by one of his broken units.

E69. IDEOLOGY CONFLICT

When this event occurs, the receiving player moves his Surrender marker into the next higher space on his side of the Casualty Track. If he has at least one friendly berserk unit, increase the opponent's confusion level by 1.

E70. FOG OF WAR

When this Event occurs, each player's confusion level increases by 1.

E71. HERO

When this event occurs, if the receiving player's Hero unit is not already on the map, he may place it into any friendly hex. If he does, he may rally one broken unit in that placement hex.

E72. INFILTRATION

When this Event occurs, the receiving player performs the following steps:
1) Make a roll on his nation's Support Table;

2) From the column matching the roll, select one item – at no cost – that is available for that scenario's year;
3) Determine a Random Hex;
4) Place the selected unit (along with its Weapon, if any) in or adjacent to that hex. Stacking limits must be observed, and the unit cannot be placed in an impassable hex (such as a Blaze or Water Barrier).

E73. INTELLIGENCE
When this event occurs, if the receiving player has an Initiative card, he gains 1VP. Otherwise, he takes an Initiative card from the opponent.

E74. INTERDICTION
When this event occurs, the receiving player must select one unsuppressed unit (enemy or friendly; broken or unbroken) that occupies a hex with Cover less than 1. Place a suppressed marker on that unit.

E75. KIA
When this Event occurs, the receiving player must select one broken unit (enemy or friendly) and eliminate it.

E76. LEAFLET BOMBS
When this event occurs, the receiving player chooses to do one of following:
– decreases his Surrender level by 1; or
– give the Initiative card to his opponent;
'Leaflet Bombs' is a word meaning a leaflet containing propaganda or inflammatory text. During the Korean War, when radio and other broadcast media were not popular, leaflets scattered by airplanes or shells played a role similar to today's TV commercials. From the start of the war to the end, a total of 2.8 billion leaflets were scattered across the Korean peninsula, both enemy and friendly, and were used as a key means of psychological warfare.

E77. MALFUNCTION
When this Event occurs, the receiving player must determine a Random Hex. The unbroken Weapon (enemy or friendly) that is closest to that hex breaks. In case of a tie, the player drawing the Event chooses which will be affected.

E78. MEDIC!
When this event occurs, the receiving player must select one broken unit (enemy or friendly) and rally it.

E79. MISSION OBJECTIVE
When this Event occurs, the receiving player draws one (secret) Objective chit at random. This new Objective chit does not replace any existing Objective chit – it is used in conjunction with them – and may be kept secret from the opponent unless it is one that has no "(secret)" side.

E80. PRISONERS OF WAR
When this event occurs, the receiving player must select one of his own broken units that is adjacent to or in the same hex as an enemy unit and eliminate it.
If it somehow wasn't a good idea before, try to keep your broken units far away from enemy units.

E81. RECONNAISSANCE

When this event occurs, the opposing player must select and reveal one of his unrevealed secret objective chits, if any. The revealed chit becomes an open objective chit for the remainder of the game.

Remember to award any VPs corresponding to that chit's mapboard objective(s) to their current controller right away.

E82. REINFORCEMENTS

When this Event occurs, the receiving player performs the following steps:

1) Make a roll on his nation's Support Table;

2) From the column matching the roll, select one item – at no cost – that is available for that scenario's year;

3) If a unit is selected, he places it (along with its Weapon, if any) into any hex along his friendly board edge. Stacking limits must be observed, and the unit cannot be placed in an impassable hex (such as a Blaze or Water Barrier).

E83. SCROUNGE

When this Event occurs, the receiving player may select one eliminated Weapon (enemy or friendly) from the Casualty Track and return that Weapon to play under the control of one of his units currently without a Weapon.

Design note—The weapon coming into play is not necessarily the same weapon that was removed earlier; it could just be one that up until that time had had no impact on the battlefield. The Weapons Box of the Casualty Track is really not much more than a mechanical enabler for this particular event.

E84. SHELL SHOCK

When this event occurs, the receiving player must determine a random hex. Break the unit (enemy or friendly) closest to that hex. In case of a tie for closest unit, the player drawing the event chooses which will be affected.

E85. SHELLHOLES

When this event occurs, the receiving player must determine a random hex. If that hex is not water terrain and does not already contain a blaze or fortification of any kind, place a foxholes marker into it.

E86. STRATEGIC OBJECTIVE

When this event occurs, one objective chit is drawn at random and placed face up ("open") in the center section of the Objectives Box for both players to see.

This new objective chit does not replace any existing chits—it is used in conjunction with them. And if this new chit references one or more mapboard objectives, remember to award those victory points to the objectives' current controller right away.

E87. SUPPRESSING FIRE

When this event occurs, the receiving player may place a suppressed marker on one enemy unit without one that is within both the current range and LOS of one of his functioning MGs—"functioning" meaning the MG itself cannot be broken, nor can the unit possessing it be broken or suppressed.

E88. WALKING WOUNDED

When this event occurs, the receiving player must perform the following steps in the order shown:

a) Select one eliminated unit (enemy or friendly) on the Casualty Track;

b) Determine a random hex;
c) Place the selected unit in or adjacent to that hex, broken. The unit can't be placed in an impassable hex (such as a blaze).

E89. WHITE PHOSPHORUS

When this event occurs, the receiving player may draw a random smoke marker then place it into a hex adjacent to one of his unbroken squads (only). The selected hex cannot be water terrain nor contain a blaze. If he does, each player that controls a unit in that hex must choose one such friendly unit and break it.

TERRAIN

T90. GENERAL RULES

Your first time through the rules, you only need to read sections. The rules for the individual terrain types, can then be referred to as needed depending on which map is being use.

T90.1 Types & Features

One of the two generic player aid cards contains a Terrain Chart showing stats for the different terrain in the game. Terrain "Types" are shown on this Chart with green backgrounds. Terrain "Features" are shown with tan backgrounds and generally only serve to modify the Terrain Type they share a hex with. The Terrain Chart also lists the various terrain in hierarchical order—that is, if a hex contains two or more Terrain Types, the one closest to the top of the chart takes precedence.

Example: A bridge together with a stream is a "bridge hex" for all purposes, not a "stream hex" (and thus not a water hex, either). This also means that a hex is an "open ground hex" only if it contains none of the terrain types shown above it (those with their text on a green background)—it could contain any of the terrain features shown below it (those on a tan background) and still be an "open ground hex", albeit with some sort of modification.

T90.2 Move Costs

Each terrain lists a "Move Cost" which is the amount of MPs a unit must expend to Move into that hex. The Advance order does not require MP expenditures and thus terrain move costs are ignored when performing that activity.

T90.3 Cover

T90.3.1 General Rules

Each terrain lists a "Cover" in the form of a whole number, which can be negative. Cover directly modifies the morale of every unit in the same hex at all times and for all purposes. Cover is never cumulative, however, so a unit's owner must choose only one instance of Cover to apply if more than one is present.

Squad A shoots at team B with a printed morale of 7 in a Rice Paddy(Wet) hex. The team's current morale is actually 8 because of the 1 Cover afforded by the Rice Paddy(Wet). If the team was stacked with a foxholes marker, the owning player could choose to ignore the Cover of the Rice Paddy(Wet) and instead add the 3 Cover of the foxholes, giving it 10 morale.

T90.3.2 Overstacking Penalty

Cover within any hex that is overstacked is reduced by one for each soldier figure present above 7.

Two US squads with printed morales of 7 are stacked in a Rice Paddy(Wet) hex. Since the hex is overstacked by one soldier figure, the nominal 1 Cover afforded by the Rice Paddy(Wet) instead drops to 0. If a third US squad was stacked there (12 total soldier figures, or 5 figures over the stacking limit) the Cover of the hex would instead be -4 (negative four), causing each squad's morale to drop to 3!

T90.4 LOS

Each terrain lists whether it is an Obstacle, Hindrance or Clear.

- Obstacles block same-level LOS. Obstacles usually create one Blind Hex to a higher-level observer.
- Hindrances reduce the FP of same-level fire attacks traced through them.
- Clear terrain has no affect on LOS.

See the LOS rules for more detail.

The various types of terrain are described in detail, below, and are listed in alphabetical order for ease of reference. The information that follows is also shown graphically on the Terrain Chart located on one side of the player aid sheet.

T91. BEACH
MOVE COST: 1.5
COVER: 0
LOS: Clear
Sand—The Fire Attack Total of any fighter(Dropping Napalm), radio(Fire for Effect) or ordnance weapon attacking a beach hex is always decreased by 2.

T92. BLAZE
MOVE COST: Impassable
COVER: Impassable
LOS: Obstacle(at all levels)

T93. BRIDGE
A bridge may span the entirety of one or more hexes, with a small part of the bridge extending across the outermost hexsides into opposite hexes—in this case, those opposite hexes are not considered bridge hexes.
MOVE COST: 1 if traversing a bridge/road/ trail hexside; otherwise use the cost of the other terrain in the hex.
COVER: 1
LOS: Clear

T94. BUILDING
MOVE COST: 2
COVER: 3
LOS: Obstacle; creates one Blind Hex Building Objectives—If a mapboard Objective occupies a building hex, and that building spans two or more hexes, the “Objective” is considered to be the entirety of that building (that is, every hex that it occupies), not just the hex containing the Objective number.

T95. BUSH
MOVE COST: 2
COVER: 2
LOS: 2 Hindrance
This catch-all terrain represents a diverse set of ground effects such as brush, crags, light jungle or woods, coral, scree, scrub, boulders, etc.

T96. FENCE
MOVE COST: +1 when crossing.
COVER: none
LOS: 1 Hindrance; or Clear if the Fence is one of the six hexsides of the sighting or target hex.

T97. FIELD
MOVE COST: 1
COVER: 0
LOS: 1 Hindrance

T98. GRASS

MOVE COST: 2
COVER: 0
LOS: 3 Hindrance

T99. GULLY

MOVE COST: 2
COVER: 1
LOS: Clear Depression—A unit in a gully cannot be seen except from an adjacent hex or a hex at a higher level, and vice versa.

T100. HILLS

Due to the relative complexity of hills, new players may want to play their first few scenarios on those maps without hills.

The standard buff green open ground hex in CC:K is said to be at level "0" or "ground level". Hills can then be thought of as being at levels 1 (tan), 2 (light brown), 3 (medium brown) or 4 (dark brown). Therefore, a unit on a hill is above any terrain occupying either a ground-level hex or a hill hex of a lower level. The level at which a hill hex's center dot lies is its actual level when multiple levels appear in a hex. A hill hex functions exactly like any other ground level hex except as modified below.

T100.1 Uphill Movement

When entering a hex that is at a higher level than the one it is leaving, a moving unit must expend +1 MP per elevation change. There is no MP modifier – lost or gained – when moving downhill.

A unit moving from a level 0 hex into an adjacent level 2 hex would have to expend +2 MPs to do so. A unit moving from a level 1 hill hex containing jungle to a level 2 hill hex containing jungle must expend 4 MPs (3 for the jungle plus 1 for the change in level). The reverse "downhill" move would cost only 3 MP.

T100.2 Height Advantage

A Fire Attack suffers –1 FP if the target hex is at a higher level than any one firing unit or weapon. Conversely, a Fire Attack gains +1 FP if the target hex is at a lower level than any one firing unit or weapon. Attacks made by radios and aircraft are not affected.

T100.3 Hills & LOS

T100.3.1 Military Crest Lines

A hex showing more than one level is termed a "Crest" hex. The level at which a Crest hex's center dot lies is its actual level. In every Crest hex, the physical edge of each hill level is termed a "Crest Line".

T100.3.2 Vertical LOS

A unit may only trace a LOS into the initial Crest hex of each level above it. Likewise, a unit on a hill may trace a LOS to a hex at a lower level only if that LOS never passes through a Crest Line of equal or greater height in an intervening hex.

So unit A on a hill can see unit B at a lower level only if the LOS from unit A both: crosses a Crest Line before it crosses a hexside; and never again crosses a Crest Line of the same or higher level.

A unit on a level 2 hill can see past an intervening level 2 hill only to another hill hex of level 2, 3 or 4. If that intervening hill were instead level 3, the target hex would have to be at level 4 to be seen—and even then it would have to be a level 4 Crest.

It may help to think of each hill level in CC:K as a thick, flat pancake; or perhaps one layer of a wedding cake.

T100.3.3 Hills as Obstacles

A hill itself blocks LOS traced between any two hexes of lower level.
A unit on a level 1 hill cannot see past an intervening level 2 hill to another level 1 hill hex.

T100.4 Hills & Obstacles

The LOS to or from a hill hex is blocked only if it clearly touches any part of the physical depiction of an Obstacle at the same or higher level as that hill hex. In other words, LOS to or from a hill hex is not blocked by Obstacles that lie at a lower level (exception: see Blind Hexes, below).
A unit on a level 1 hill can see past (over) intervening jungle at level 0 to another unit on a distant level 1 hill. If the jungle were also on a hill, however, that LOS would be blocked.
A blaze marker, however, always blocks LOS through its hex regardless of the sighter's or target's level.
The obstacle that a blaze marker and its attendant smoke cloud creates is considered to be at a height sufficient enough to affect any possible LOS that can be represented in the game.

T100.4.1 Blind Hexes

A unit on a hill can see into a lower-level jungle, swamp or building hex, as normal, but can not see into the next hex beyond it if that next hex is also at or lower than the jungle/ swamp/building hex's level. In other words, a lower-level jungle, swamp or building creates a one-hex blind zone behind it to an observer at a higher level—all hexes beyond this blind zone are visible from the hill (barring further jungle/swamp/buildings along the way).
A unit on a level 1 hill can see past a level 0 building except into the level 0 hex directly behind it. Conversely, a unit on a level 1 hill could see past an intervening level 1 building to a unit at level 2 or higher unless that building was in the first intervening hex along that LOS.

T100.5 Hills & Hindrances

Any mapboard Hindrance terrain at a lower level does not hinder LOS to or from a hill hex. A Hindrance on a hill does hinder LOS between two other hill hexes of the same level as that Hindrance. A smoke marker, however, always hinders LOS through its hex, regardless of the sighter's or target's level.
The hindrance that a smoke marker creates is considered to be at a height sufficient enough to affect any possible LOS that can be represented in the game.
Note that all the above hill rules are based upon the premise that in CC:K each hill level is taller than a mapboard Obstacle, and every mapboard Obstacle is taller than a mapboard Hindrance.

T101. MARSH

MOVE COST: 3
COVER: 0
LOS: 1 Hindrance
WATER TERRAIN: No Weapon of any kind may fire from a Marsh hex. No Blaze, Smoke or Fortification of any kind may ever occupy a Marsh hex.

T102. MUDFLAT

MOVE COST: 2
COVER: 0
LOS: Clear
Semi-Water Terrain- No blaze, smoke or fortification of any kind may ever occupy a mudflat hex.

Mud–The Fire Attack Total of any Ordnance, Radio(Fire for Effect), or Fighter(Dropping Napalm) attack against a Mudflat hex is decreased by 2.

T103. OPEN GROUND
MOVE COST: 1
COVER: 0
LOS: Clear

T104. ORCHARD
MOVE COST: 1
COVER: 1
LOS: 2 Hindrance

T105. RAILWAY
MOVE COST: 1 if travelling along the Railway depiction (that is, the moving unit crossed a Railway hexside as it entered the hex); otherwise depends on other terrain in the hex.
COVER: Depends on other terrain in the hex.
LOS: 1 Hindrance; or Clear if the LOS proceeds directly along the Railway depiction.

T106. ROAD
MOVE COST: 1 if travelling along the Road depiction (that is, the moving unit crossed a Road hexside as it entered the hex); otherwise, it depends on the other terrain in the hex.
A unit gains +1 to its Movement number as long as it entered a hex containing a Road at any point during a Move Order. This bonus ceases at the conclusion of that Move Order.
The unit need not have entered the Road hex via a road hexside to gain the bonus—here we can assume that crossing a road is also quick and easy to do.
COVER: none; however, the Cover of any other Fortification or Terrain within a hex containing a Road is decreased by 1.
So a Building hex with a Road going through it has a Cover of 2 (3 for the Building; modified by –1 for the Road). A German Squad with a printed Morale of 7 in an Open Ground hex containing a Road will be at "–1" Cover and therefore have 6 Morale for all purposes. If Foxholes were later placed in that hex, it would have a Morale of 9 (7; +3 Foxholes; –1 Road).
LOS: Clear if the LOS proceeds directly along the Road depiction; otherwise depends on the other terrain in the hex.

T107. RICE PADDY
Rice Paddy is applied in a wet state during May, June, July, and August, and in a dry state at other times.

T107.1 RICE PADDY(Wet)
MOVE COST: 2
COVER: 1
LOS: Clear
Semi–Water Terrain– No blaze, smoke or fortification of any kind may ever occupy a rice paddy(wet) hex.
Mud–The Fire Attack Total of any Ordnance, Radio(Fire for Effect), or Fighter(Dropping Napalm) attack against a Rice Paddy(Wet) hex is decreased by 2.

T107.2 RICE PADDY(Dry)
MOVE COST: 1
COVER: 1
LOS: Clear

T108. SMOKE

Before beginning play, place all smoke markers into an opaque cup so that they may be drawn at random when called for during play.
MOVE COST: Use other terrain in the hex.
COVER: Use other terrain in the hex.
LOS: 1-8 Hindrance into or out of or through.
The actual Hindrance value of smoke is printed on the markers themselves.

T109. STREAM

MOVE COST: 3
COVER: -1 (negative one)
LOS: Clear
Water Terrain—No weapon of any kind may fire from a stream hex. No blaze, smoke or fortification of any kind may ever occupy a stream hex.

T110. TRAIL

MOVE COST: 1 if traveling along the Trail depiction (that is, the moving unit crossed a Trail hexside as it entered the hex); otherwise depends on the other terrain in the hex.
COVER: Depends on other terrain in the hex.
LOS: Depends on other terrain in the hex.

T111. WALL

MOVE COST: +1 when crossing.
COVER: none; or 2 if a Fire Attack crossed the Wall as it entered the target hex (not applicable when firing Mortars or Artillery).
LOS: Obstacle; or Clear if the Wall is one of the six hexsides of the sighting or target hex.

T112. WATER BARRIER

Korea's water barrier distinguishes between deep and shallow.

T112.1 WATER BARRIER (Deep)

MOVE COST: Impassable
COVER: Impassable
LOS: Clear
Water Terrain—No weapon of any kind may fire from a water barrier hex. No blaze, smoke or fortification of any kind may ever occupy a water barrier hex.

T112.2 WATER BARRIER (Shallow)

MOVE COST: all
A moving unit must begin its Move order adjacent to the water barrier hex it enters and cannot Move into any other hexes along the way. A unit loses all remaining MPs after entering a water barrier hex, even if that hex contains a leader.
COVER: -2 (negative two)
LOS: Clear
Water Terrain—No weapon of any kind may fire from a water barrier hex. No blaze, smoke or fortification of any kind may ever occupy a water barrier hex.

T113. WOODS

MOVE COST: 2
COVER: 2
LOS: Obstacle; creates one Blind Hex

AIRBURSTS: The Fire Attack Total of any Mortar, Radio(Fire for Effect), or Fighter(Dropping Napalm) attack against a Woods hex is always increased by 2.
So a 6-FP Mortar that fires into a Woods hex and makes a Fire Attack Roll of 7 would have an Attack Total of 15 instead of 13. Shells fired at a high altitude - such as from mortars and distant artillery batteries - had a tendency to explode in the treetops. When this happened, the troops below would be subject to flying splinters and tree branches in addition to the shell blast that was not muffled by contact with the earth.

FORTIFICATIONS

F114. GENERAL RULES

The following sections need not be read and memorized your first time through the rules: They can be safely ignored until a fortification actually enters play—players can then look up the rules for that particular marker.

F114.1 Acquisition

There are seven "fortifications" in the game: cave, foxholes, trench, mines, wire, bunker and pillbox. Fortifications are normally brought into play at the beginning of a scenario, though some can also enter play during the game due to various actions and events.

F114.2 Removal

Fortifications can be eliminated during play via various events, the Destroy action, or the Fortification Vulnerability Table when its hex is attacked by artillery.

F114.3 Stacking

No more than one fortification marker may ever occupy a single hex. The first such fortification to be placed in a hex takes precedence. Fortifications may never occupy water terrain (i.e. a bridgeless stream, swamp or water barrier).

F115. BUNKER

A bunker gives the hex it occupies an alternate Cover of "6" ("7" instead vs aircraft, mortars and artillery). As usual, this is not cumulative with other Cover in the hex. During melee, the side that was the last sole occupant of a bunker hex wins if the Melee Totals are tied.

F116. FOXHOLES

A Foxholes marker gives the hex it occupies an alternate Cover of "3" ("4" instead vs Mortars and Artillery). As usual, this is not cumulative with other Cover in the hex.

F117. MINES

F117.1 General Rules

A Mines marker occupying a hex will attack any unit (enemy or friendly) that Moves, Advances or Retreats into or out of that hex. Units moving together are attacked with a single roll; otherwise a separate Mine Attack should be made against each unit as it enters, or is about to exit, a hex containing Mines. Units that were already in a Mines hex at the moment another unit Moves/Advances/Retreats into or out of it is immune to that Mine Attack.

F117.2 Mine Attack

The strength of a Mine Attack is a default 6 FP unless the scenario Defender is specifically assigned (or purchased) a 7- or 8-FP Minefield capability.
Cover for a Mine Attack is automatically set to "0", and cannot be modified by any means. A Mine Attack Roll follows the same general rules as for a Fire Attack Roll except that only the moving/advancing/retreating units in the hex need make a Fire Defense Roll. The player controlling such a unit makes its Defense Roll whereas his opponent makes the Attack Roll.
IMPORTANT—An unbroken unit that becomes broken while leaving a Mined hex is still placed in the hex it was entering.
It made it but probably has a casualty to contend with.

F118. PILLBOX

A pillbox gives the hex it occupies an alternate Cover of “5” (“6” instead vs aircraft, mortars and artillery). As usual, this is not cumulative with other Cover in the hex.
During melee, the side that was the last sole occupant of a pillbox hex wins if the Melee Totals are tied.

F119. TRENCH

F119.1 General Rules

A trench marker gives the hex it occupies an alternate Cover of “4” (“5” instead vs aircraft, mortars and artillery). As usual, this is not cumulative with other Cover in the hex.

F119.2 Trenches & Movement

A unit moving from one hex containing a trench into an adjacent hex containing a trench, bunker or pillbox (or vice versa) always expends only 1 MP to do so, regardless of the terrain in the two hexes. This applies even if the unit is moving uphill. Furthermore, that unit cannot be the target of Op Fire in the hex moved into.

F120. WIRE

F120.1 General Rules

A wire marker sharing a hex with a unit affects that unit by reducing each of its FP, range and morale numbers by 1. Command is unaffected by wire.

F120.2 Wire & Movement

A moving unit loses all remaining MPs immediately after entering or exiting a hex containing wire. *So if a unit begins its Move in a wire hex it must stop moving in the first hex entered—even if that hex contained a friendly leader. If a unit moves into a wire hex, its movement will also automatically cease there.*
Units can Advance into and out of a wire hex normally, as MPs are not utilized during an Advance order.

F120.3 Wire & Fire Attacks

Units in a hex with wire cannot form a Fire Group with pieces outside the hex. No weapon may be fired from a wire hex.
Units in a hex with wire cannot form a Harass Group with pieces outside the hex. No MG may be harassed from a wire hex.
